

FxFx: alpha_s(mZ)=0.119, two loops, A2 included. Delta: shipped tables with their original settings.
PDF factors and matching compensations excluded; this is not a complete event Delta factor.

Production FxFx versus shipped Delta tables: start = dipole mass = 200.000 GeV
Quark leg
Gluon leg (two identical colour lines)
Raw Sudakov
FxFx finite / Delta
Stopping scale [GeV]
FxFx finite
FxFx legacy
Delta II
Delta FF
Delta IF
Delta FI
FxFx: alpha_s(mZ)=0.119, two loops, A2 included. Delta: shipped tables with their original settings.
PDF factors and matching compensations excluded; this is not a complete event Delta factor.

Production FxFx versus shipped Delta tables: start = dipole mass = 500.000 GeV
Quark leg
Gluon leg (two identical colour lines)
Raw Sudakov
FxFx finite / Delta
Stopping scale [GeV]
FxFx finite
FxFx legacy
Delta II
Delta FF
Delta IF
Delta FI
FxFx: alpha_s(mZ)=0.119, two loops, A2 included. Delta: shipped tables with their original settings.
PDF factors and matching compensations excluded; this is not a complete event Delta factor.
