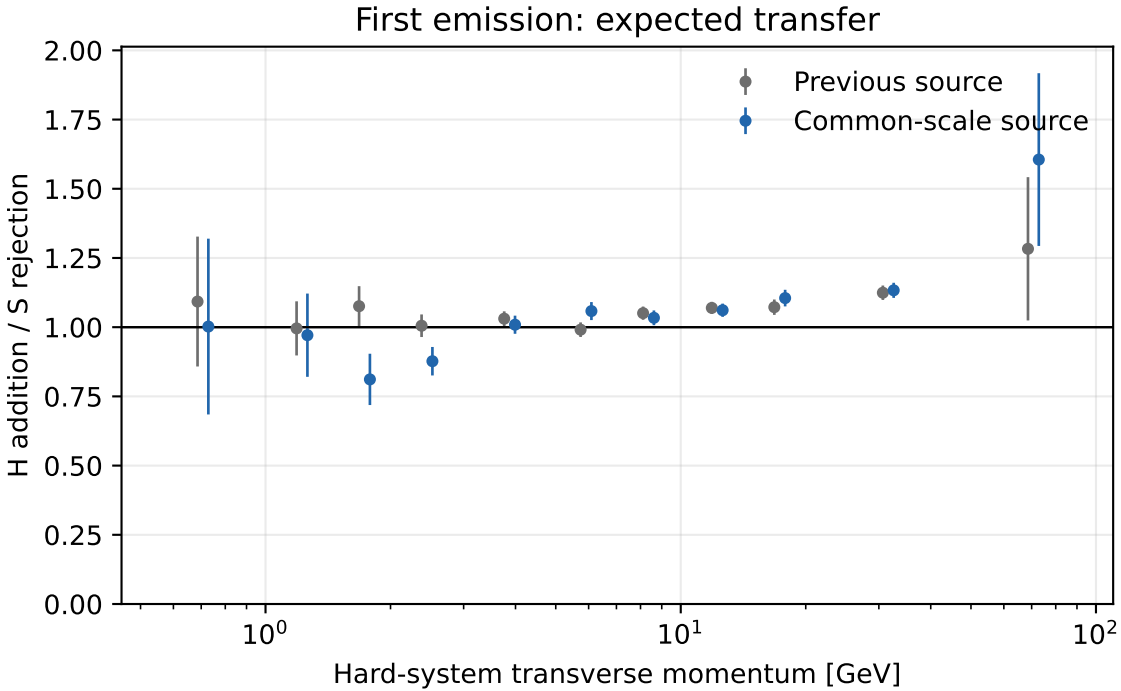
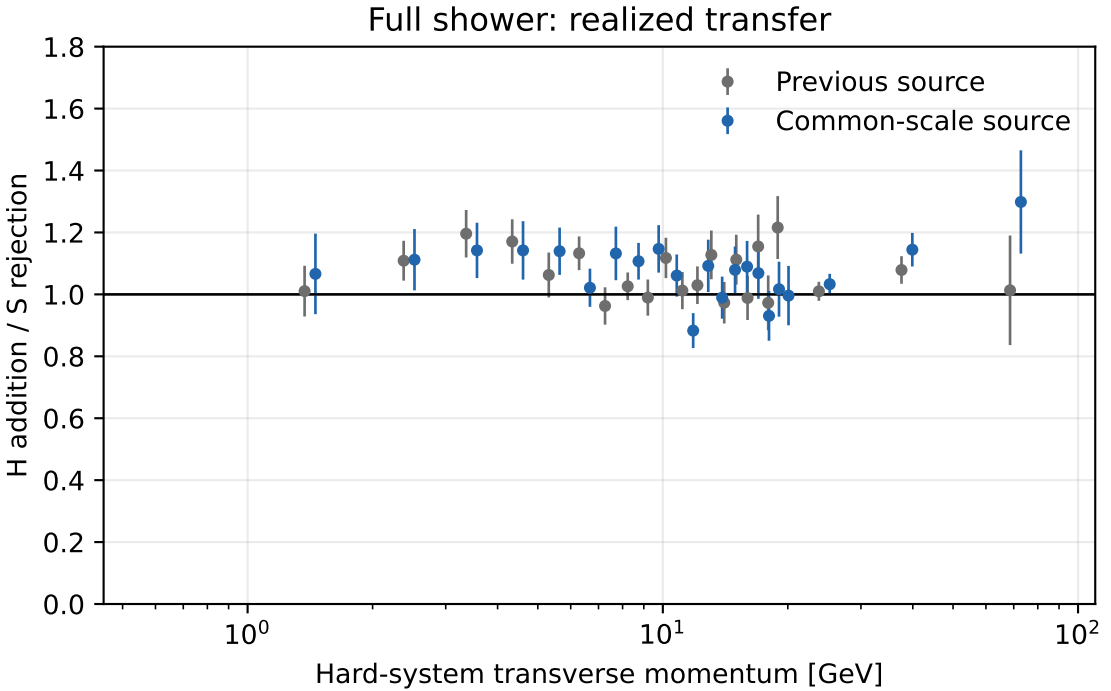
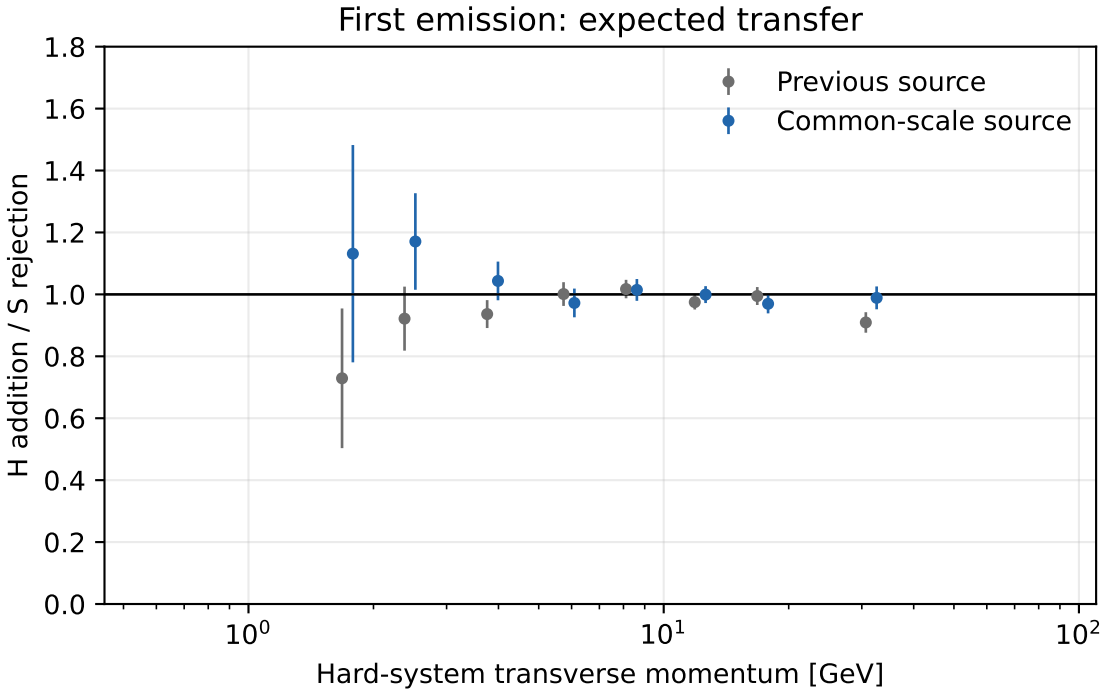
DY: independent 1M-event samples, 13 TeV, NNPDF4.0 NLO

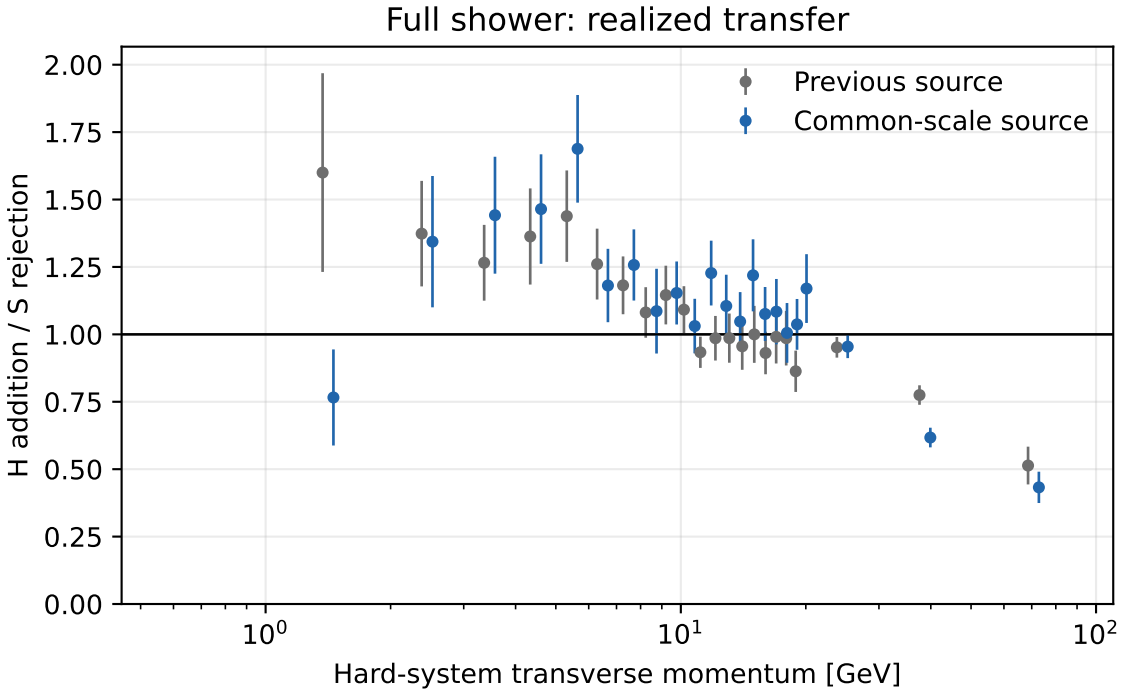




Per-event finite-sample errors before shower; correlated batch errors after shower. Only bins with both transfers sampled and ratio error <0.6 are shown.

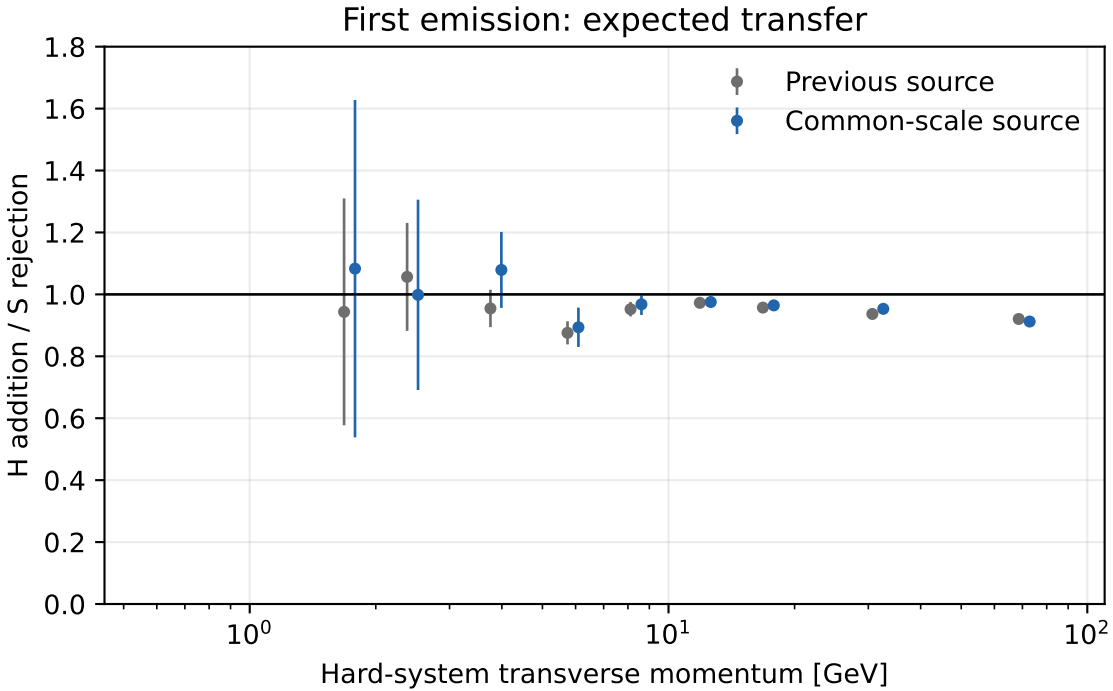
H: independent 1M-event samples, 13 TeV, NNPDF4.0 NLO

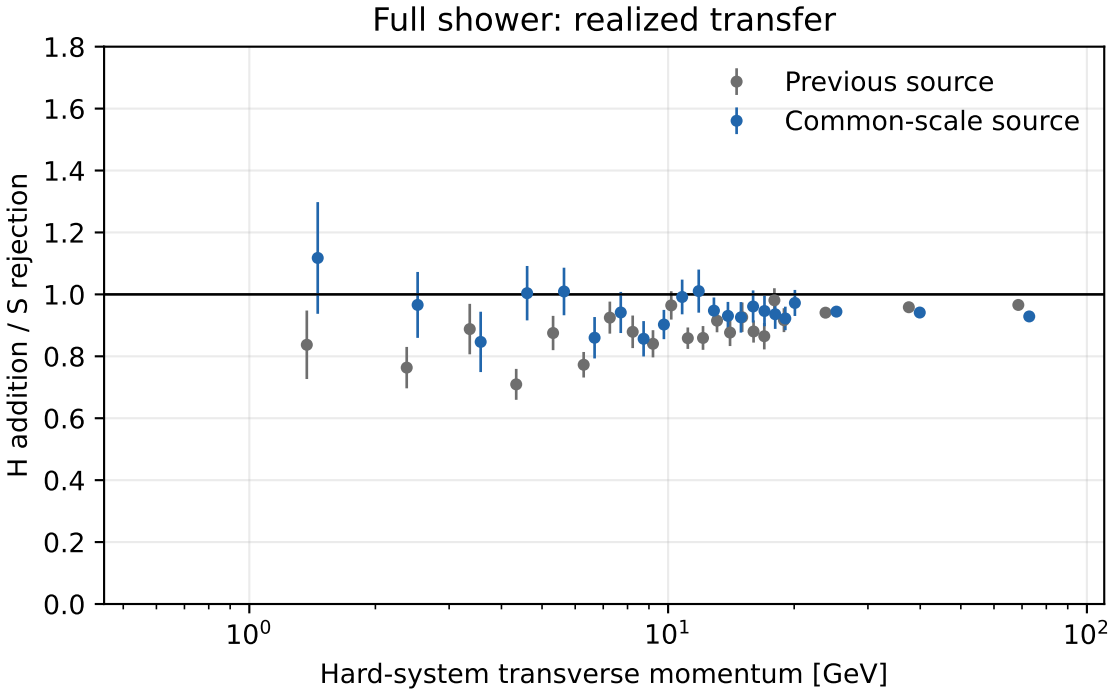




Per-event finite-sample errors before shower; correlated batch errors after shower. Only bins with both transfers sampled and ratio error <0.6 are shown.

ttbar: independent 1M-event samples, 13 TeV, NNPDF4.0 NLO





Per-event finite-sample errors before shower; correlated batch errors after shower. Only bins with both transfers sampled and ratio error <0.6 are shown. Previous ttbar shower retained QEDByOther; new sample disables it.
