EE2j: 1,000,000 events; all generated source events

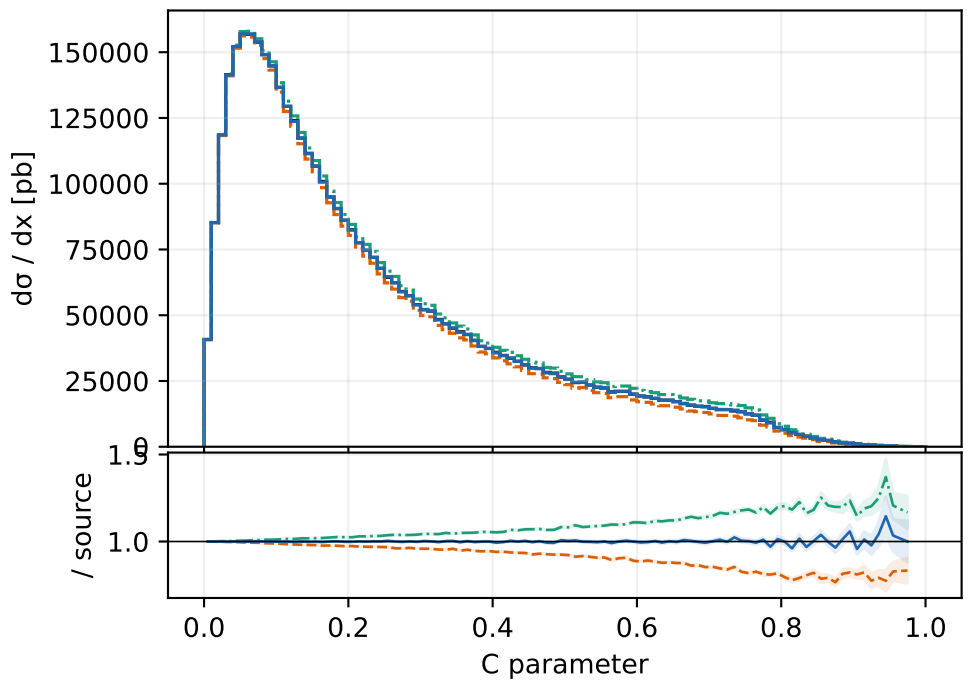

First emission

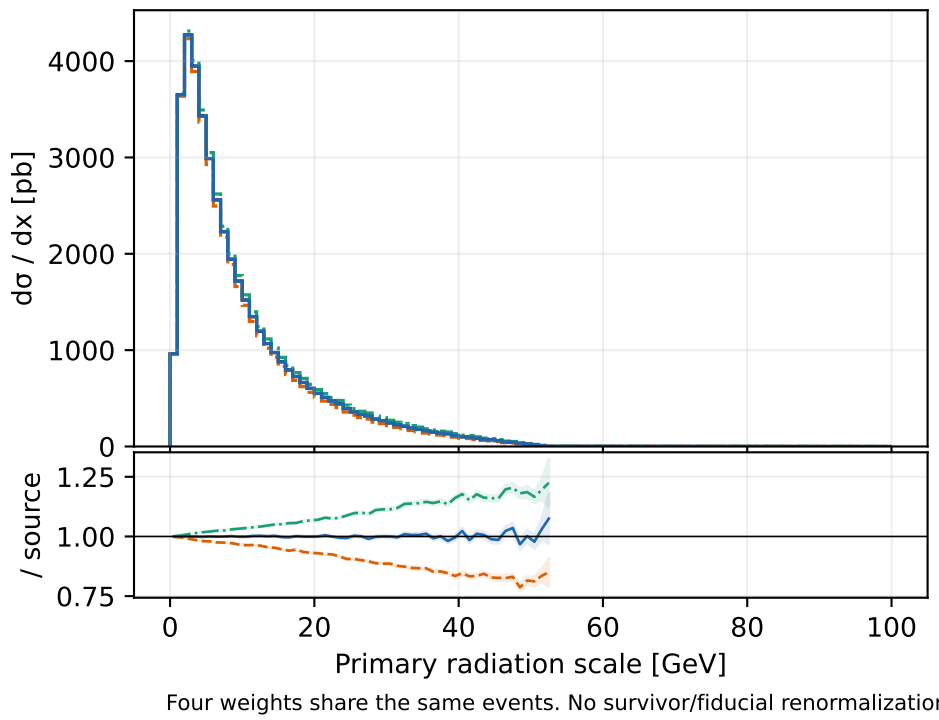

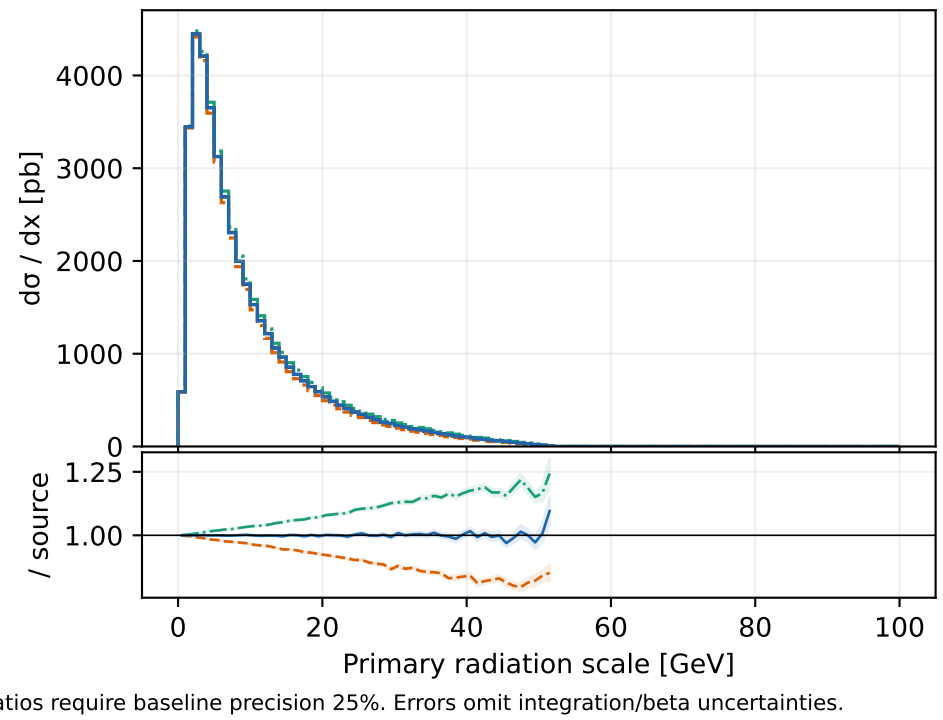

Full shower

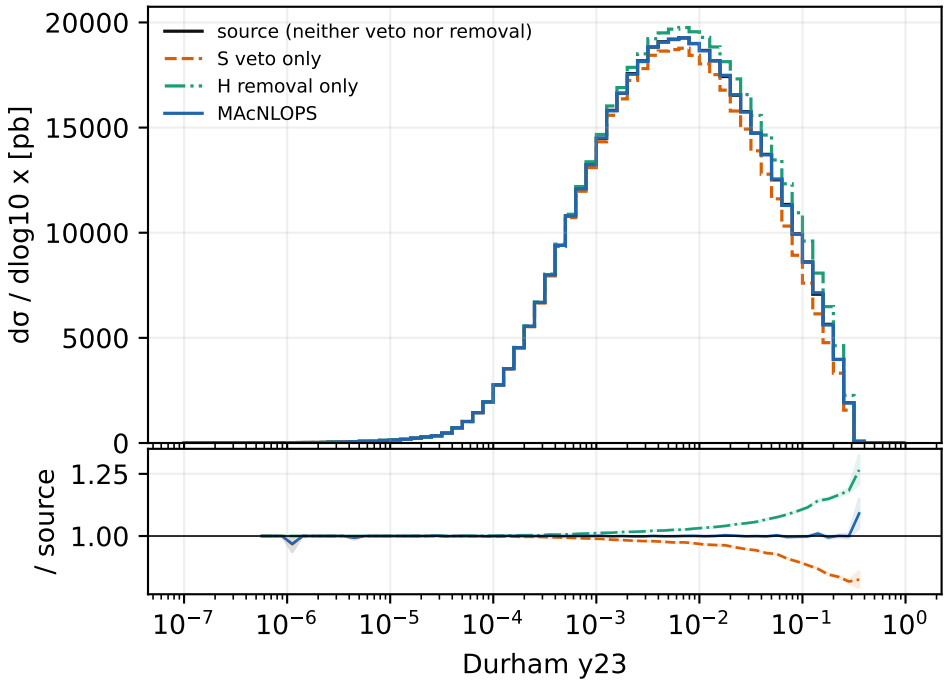

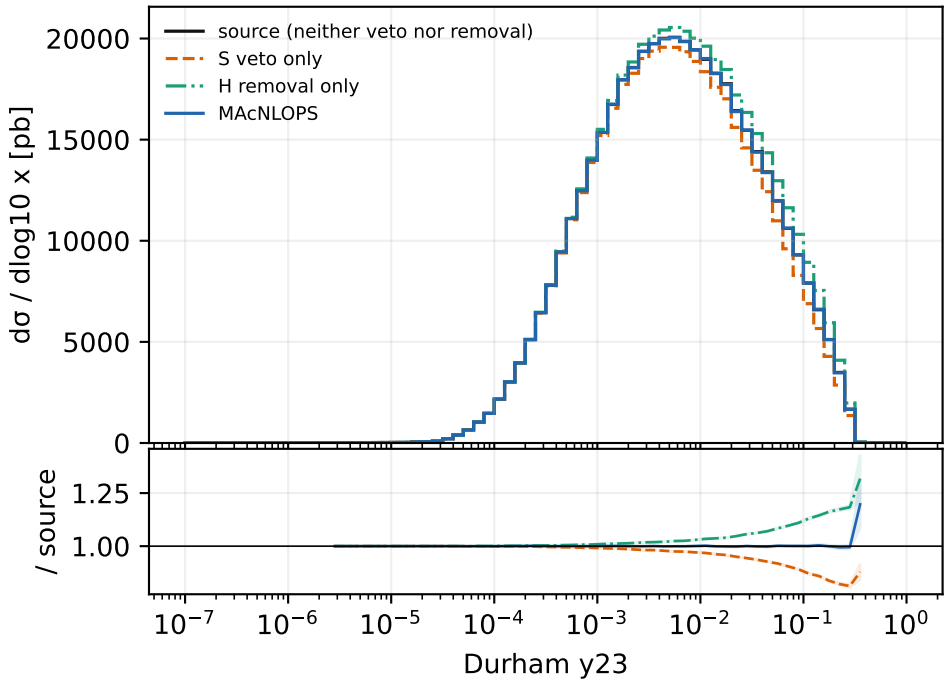

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.

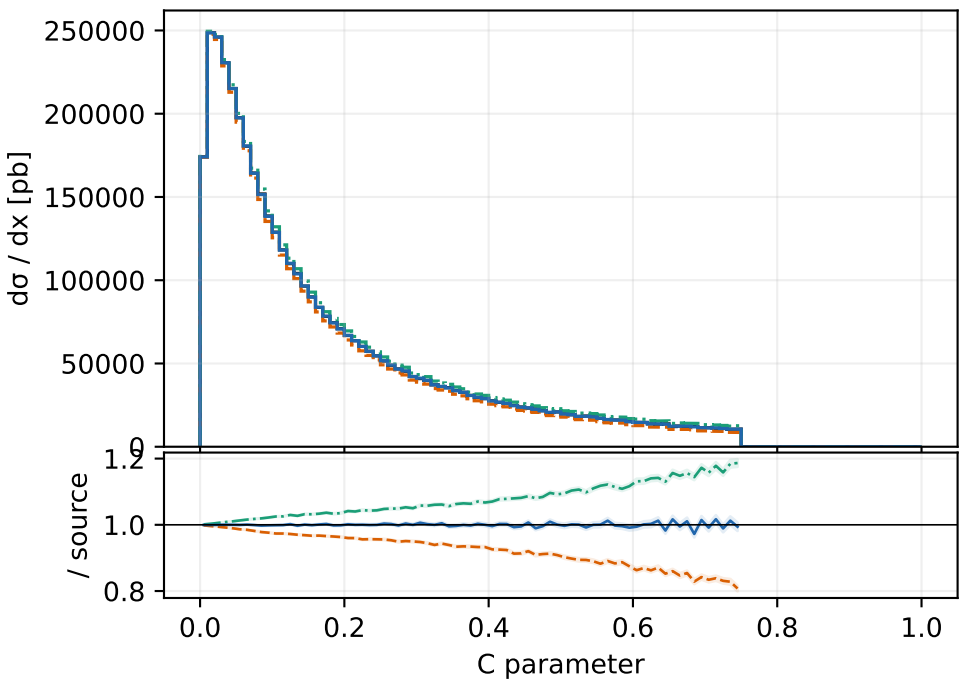

EE2j: 1,000,000 events; Durham ycut = 0.01, at least Born jet multiplicity

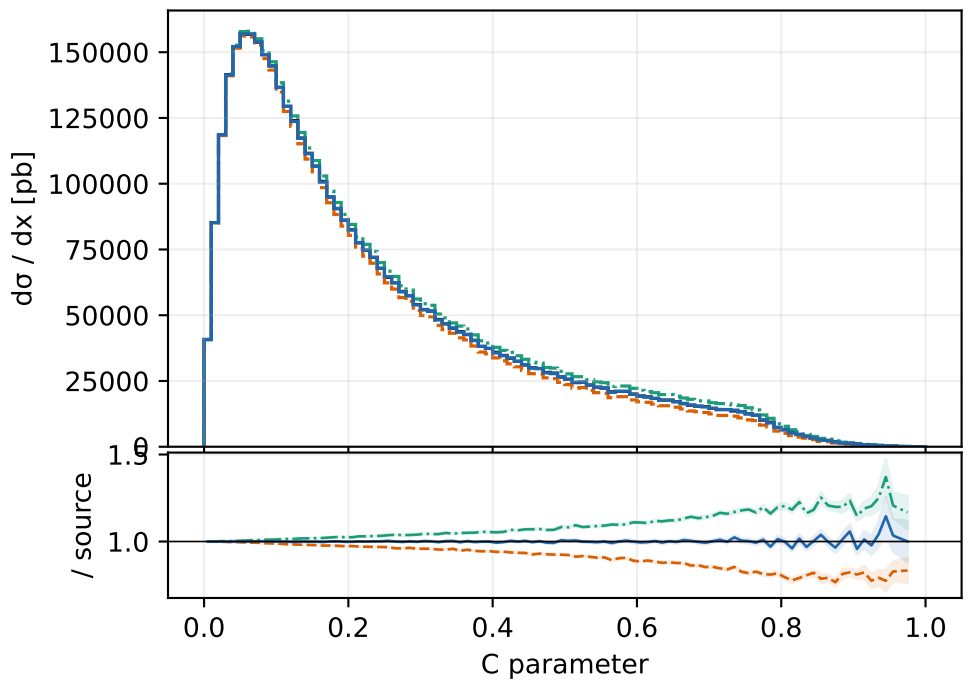

First emission

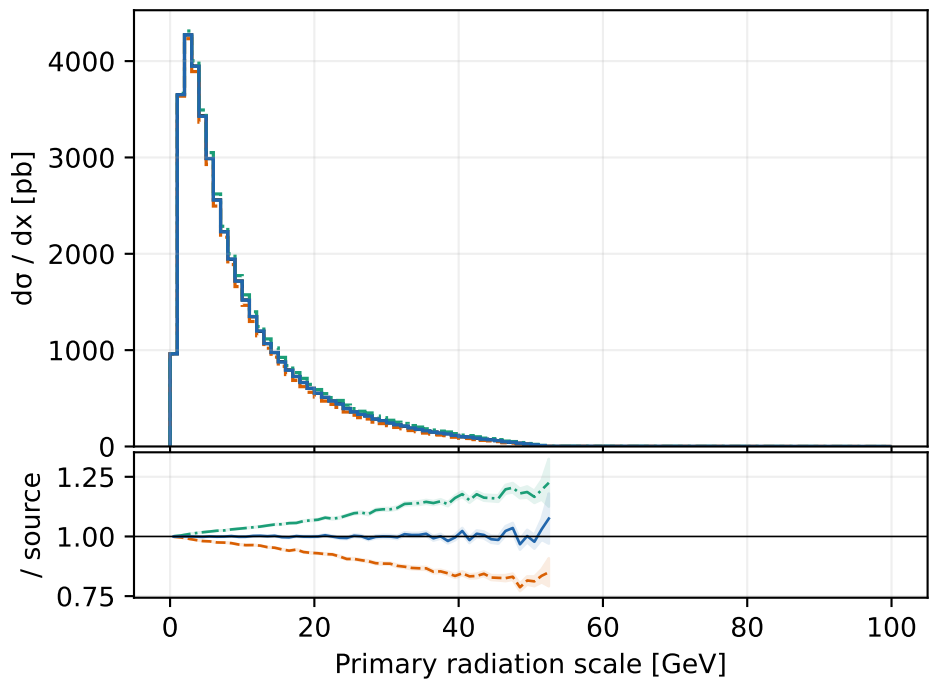

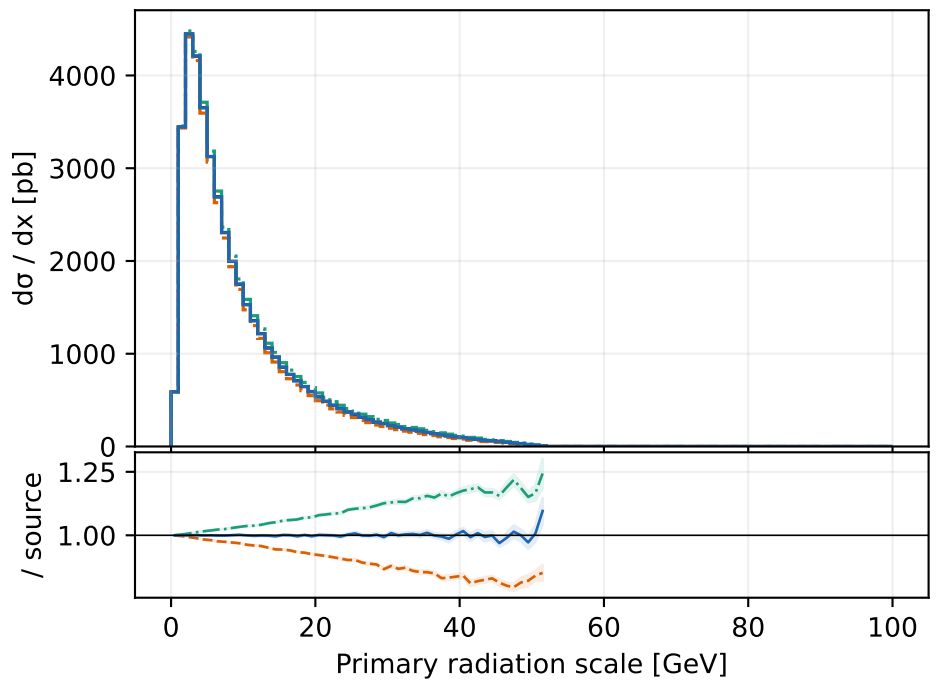

Full shower

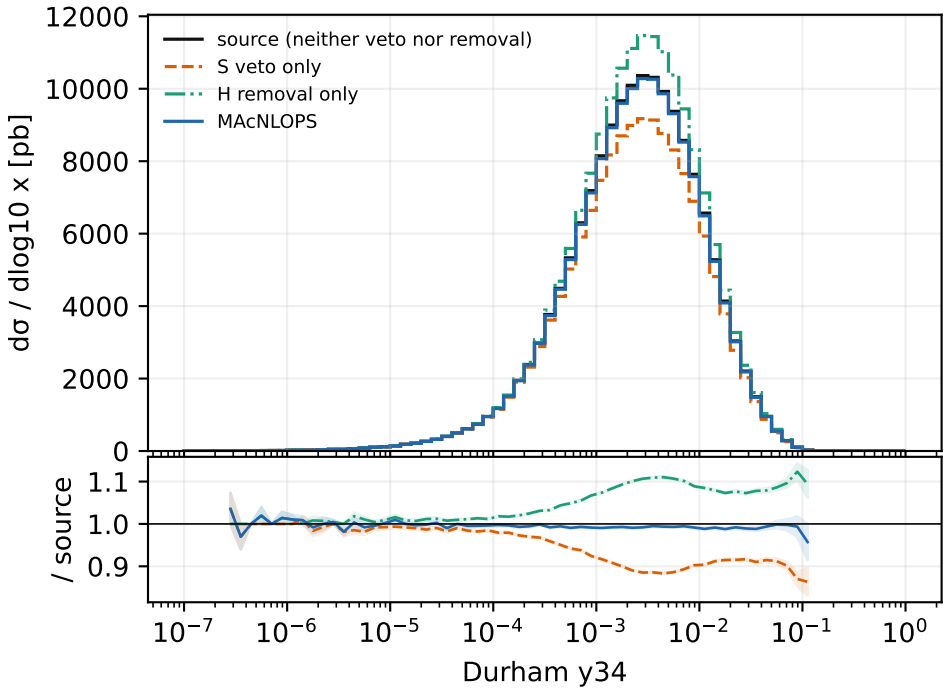

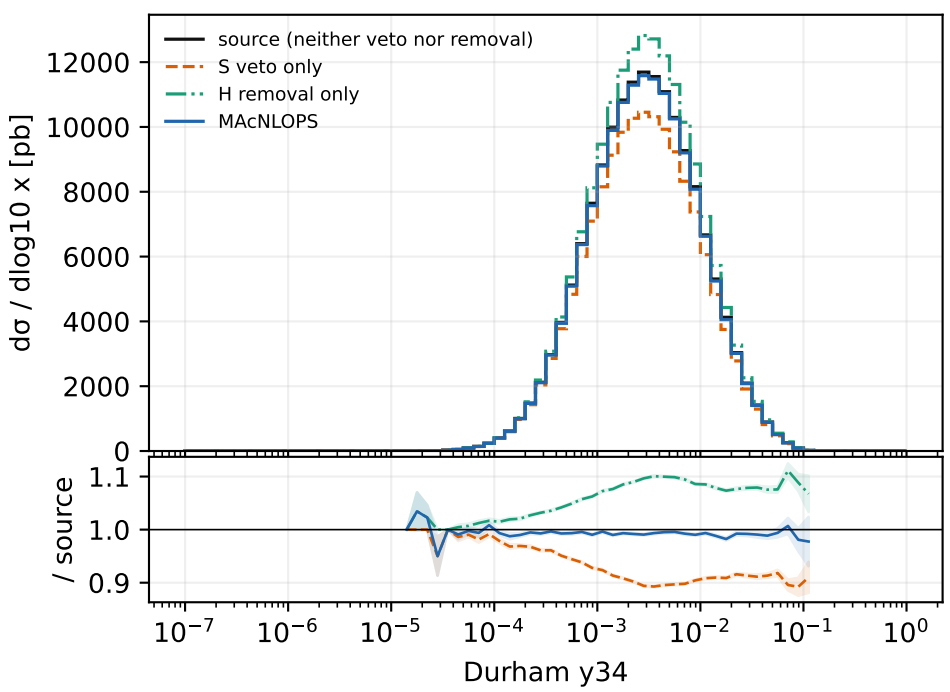

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.

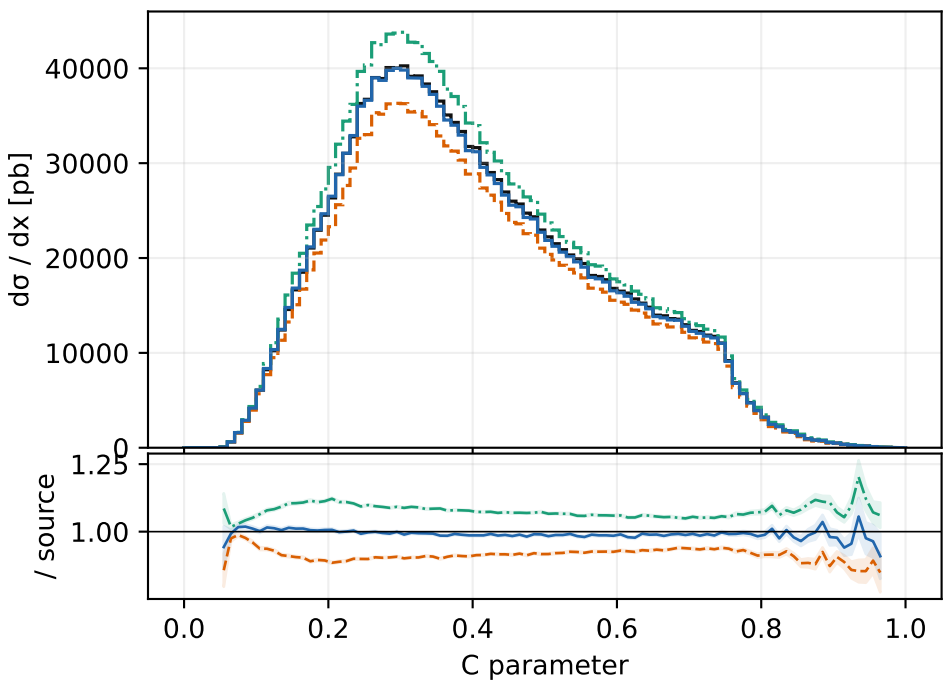

EE3j: 1,000,000 events; all generated source events

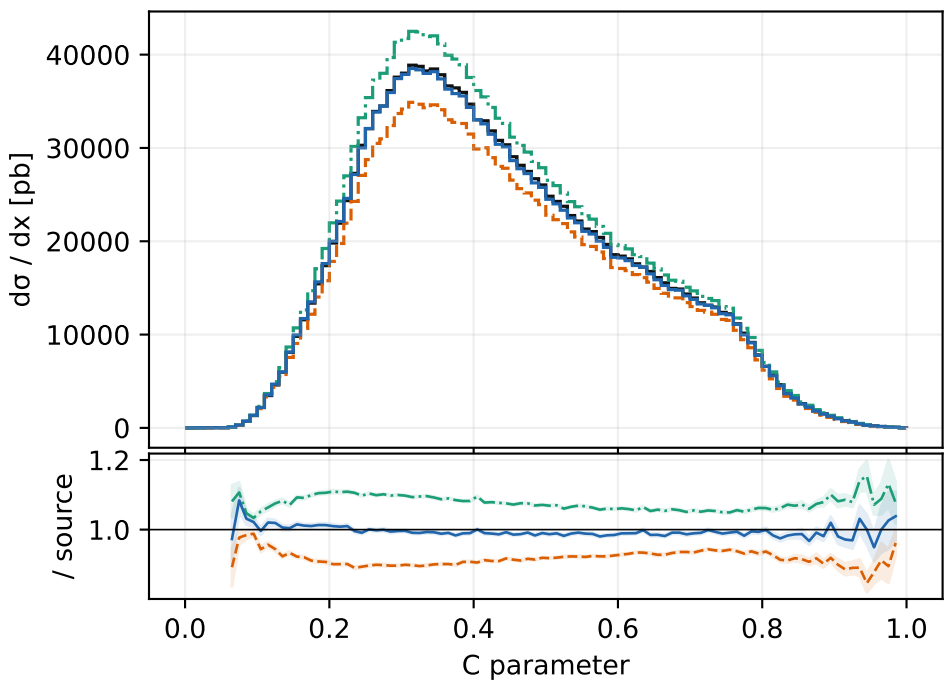

First emission

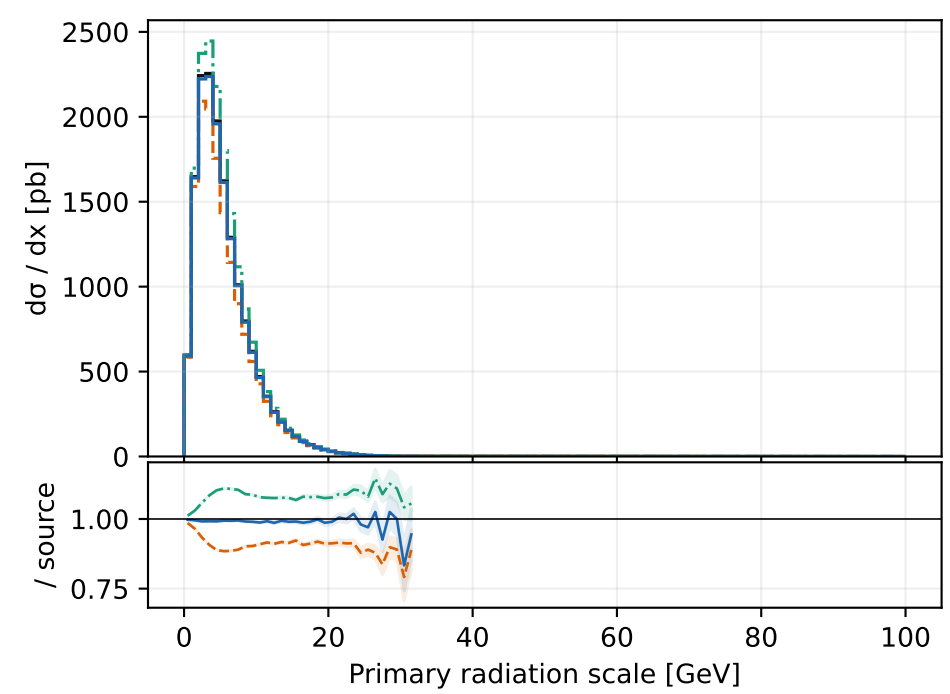

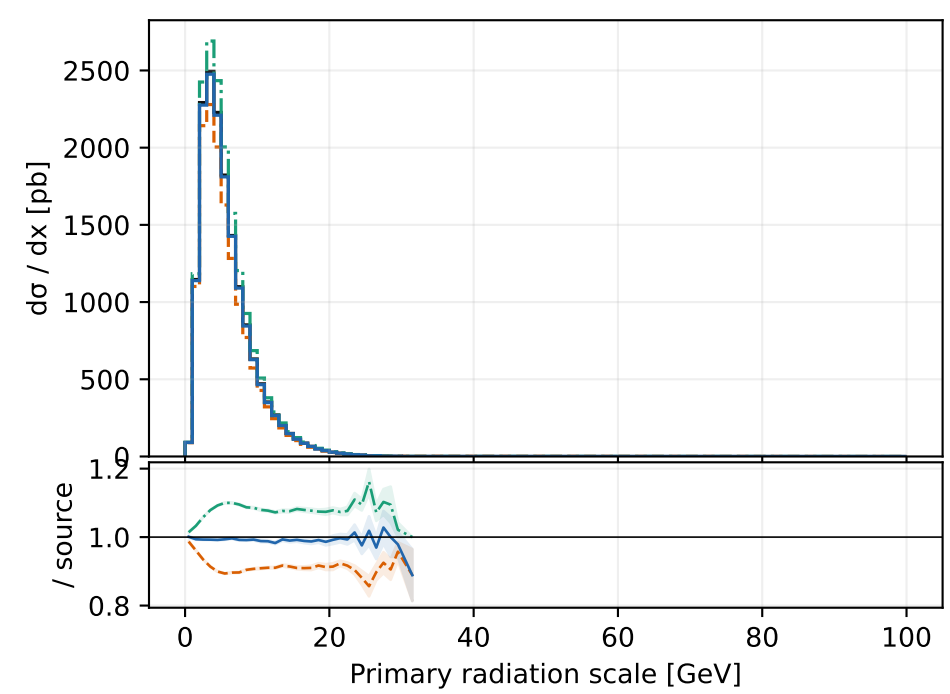

Full shower

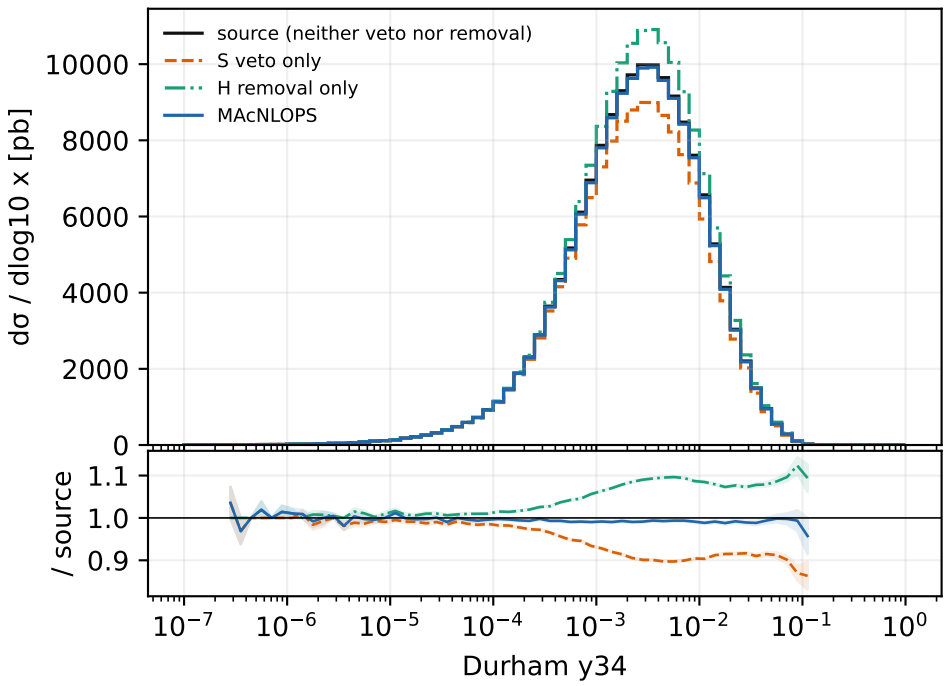

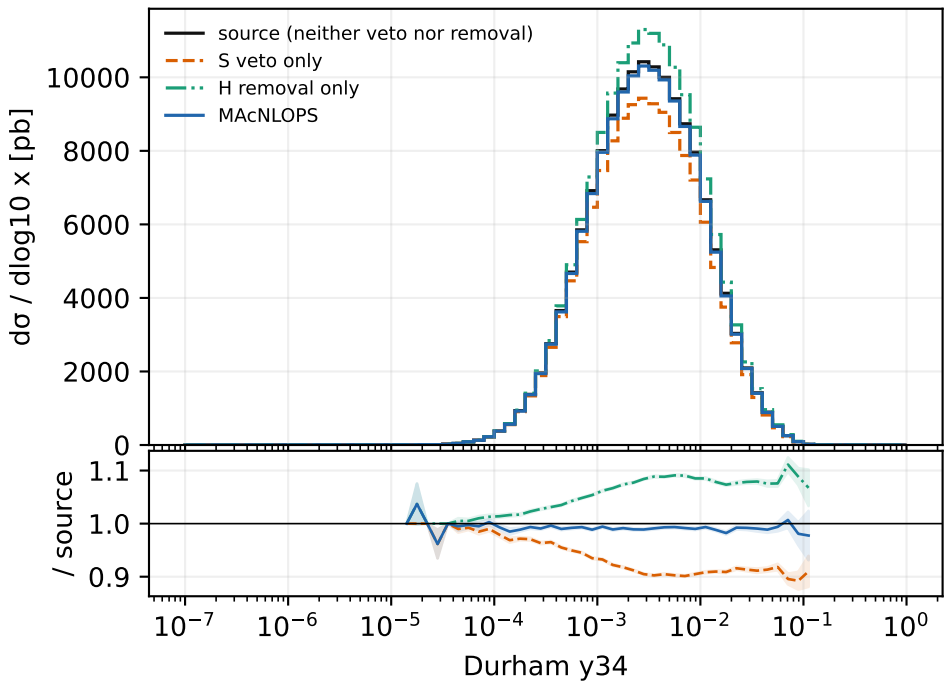

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.

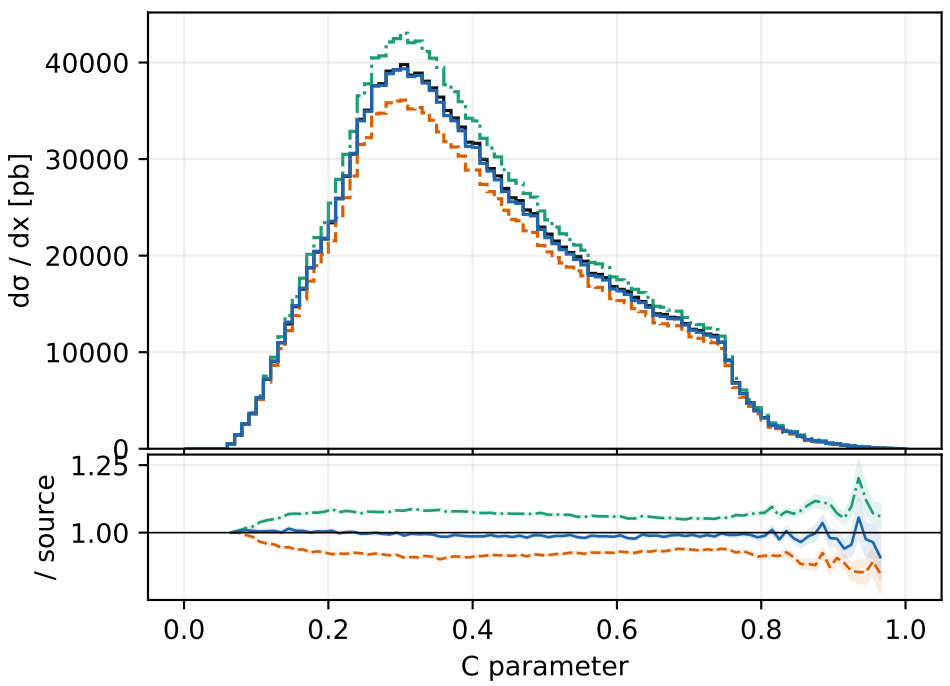

EE3j: 1,000,000 events; Durham ycut = 0.01, at least Born jet multiplicity

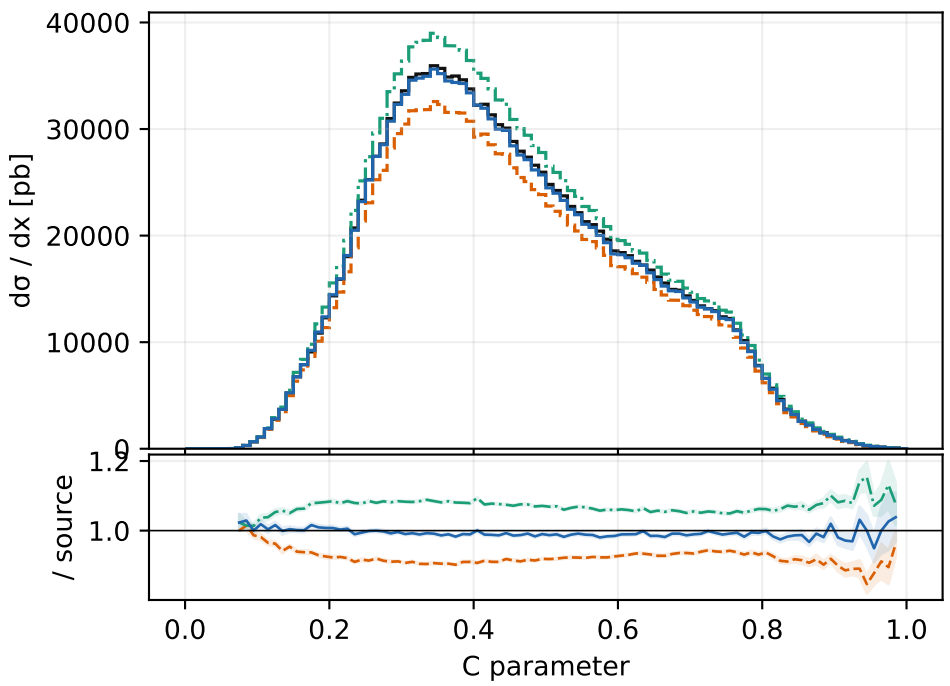

First emission

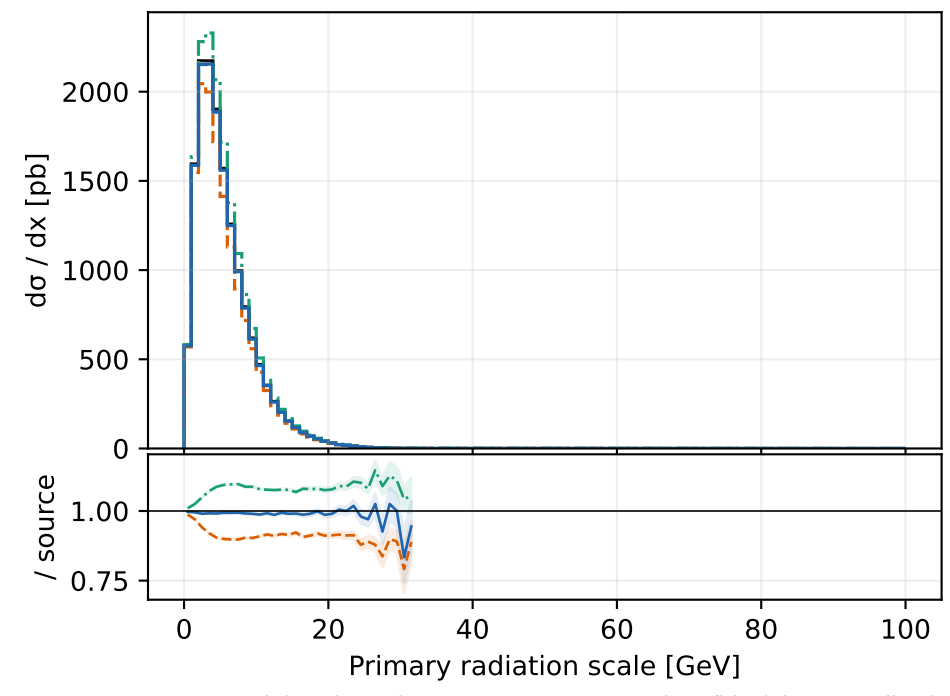

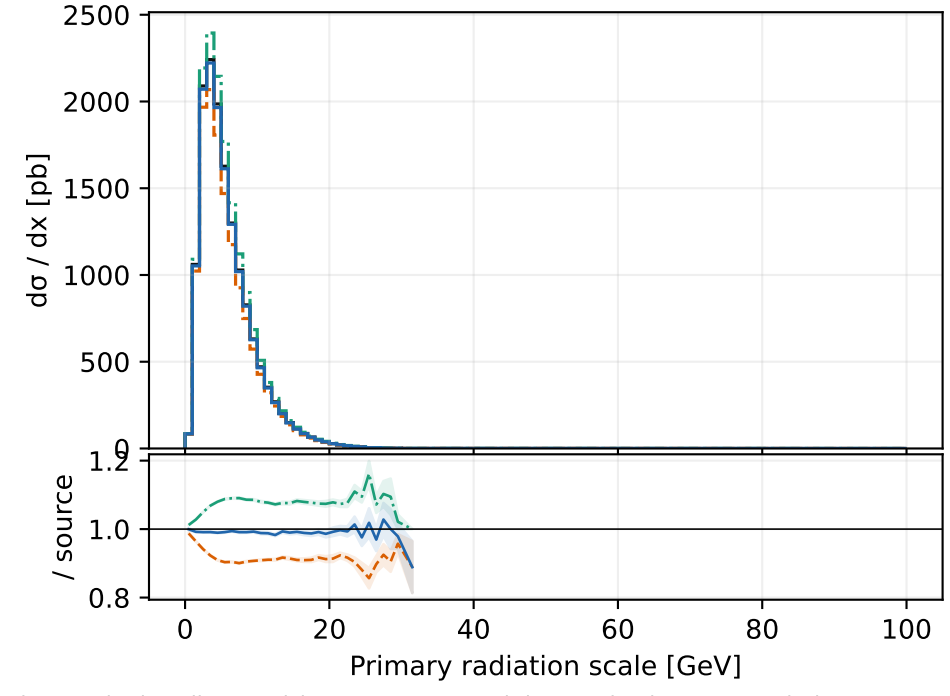

Full shower

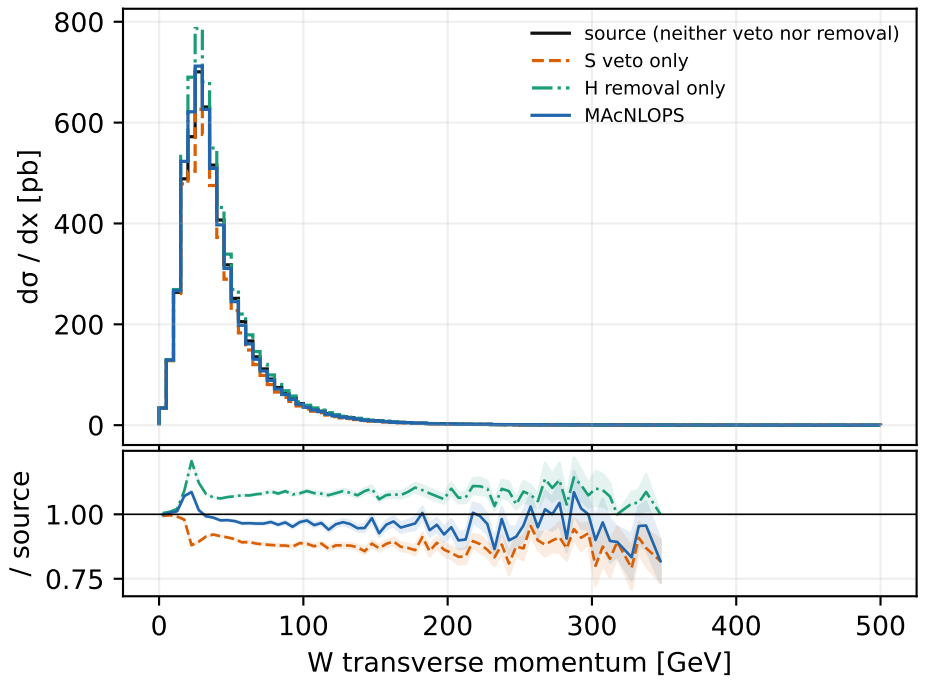

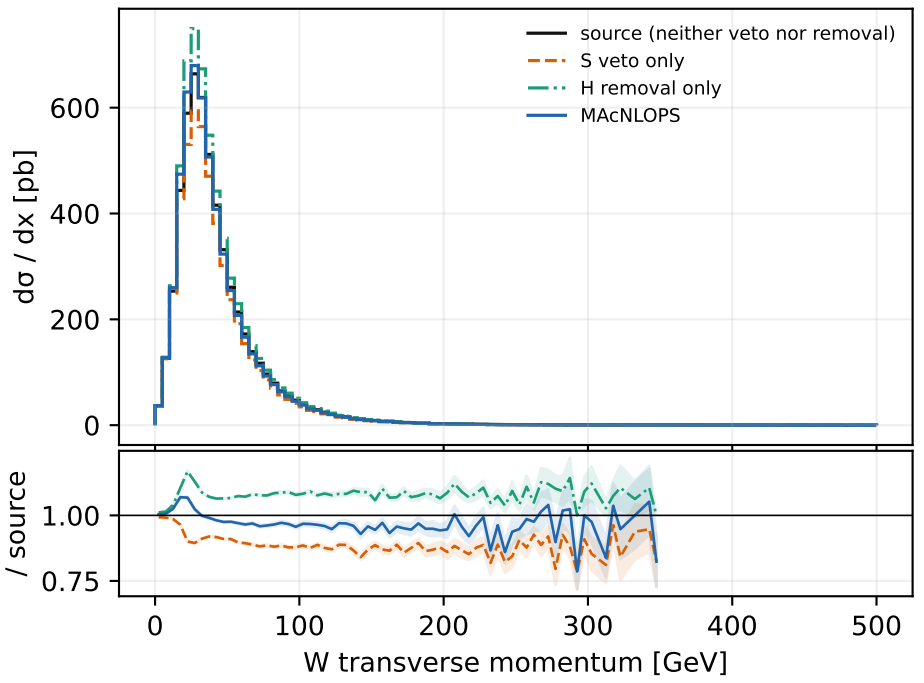

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.

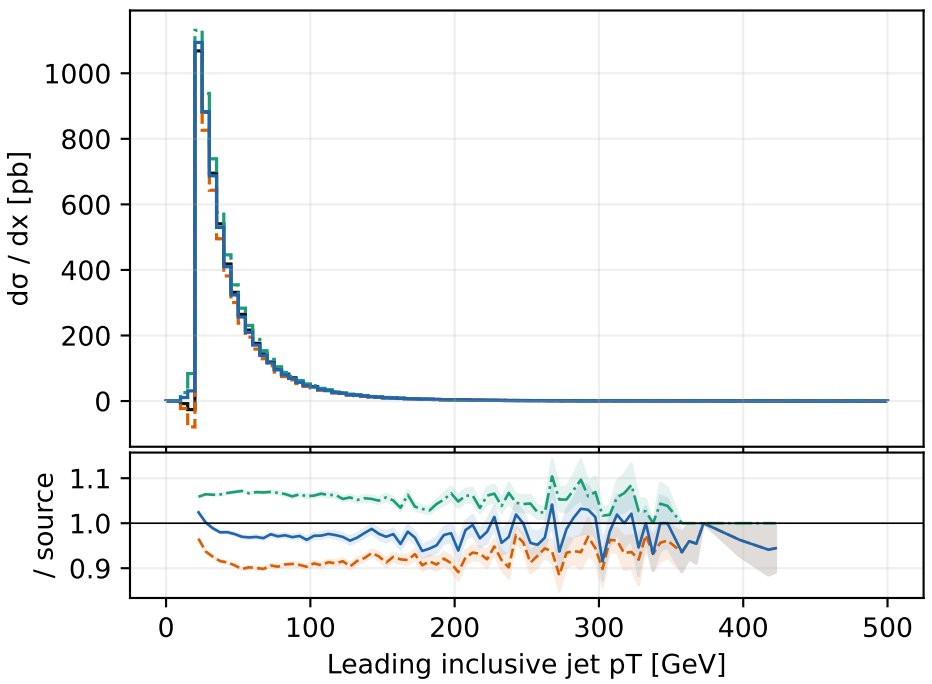

Wj: 1,000,000 events; all generated source events

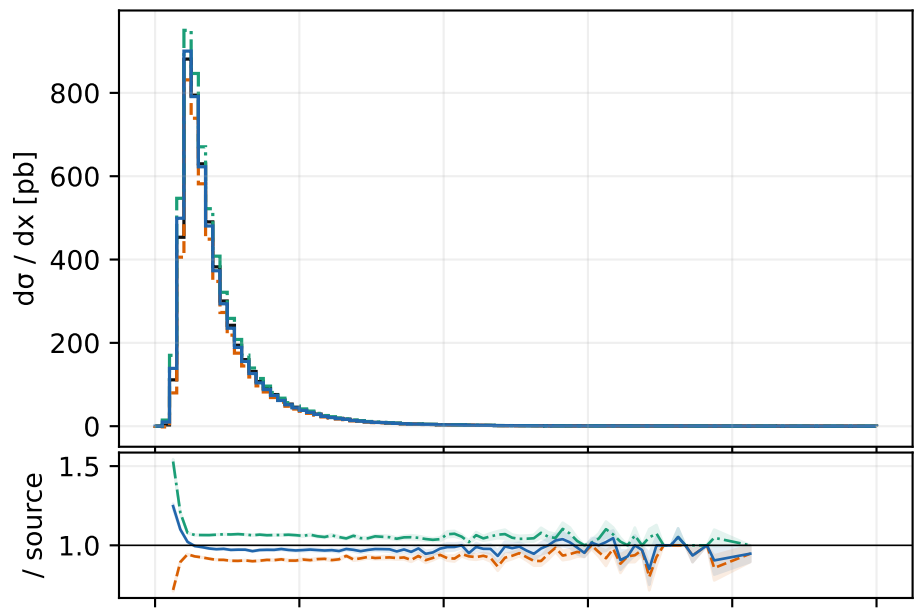

First emission

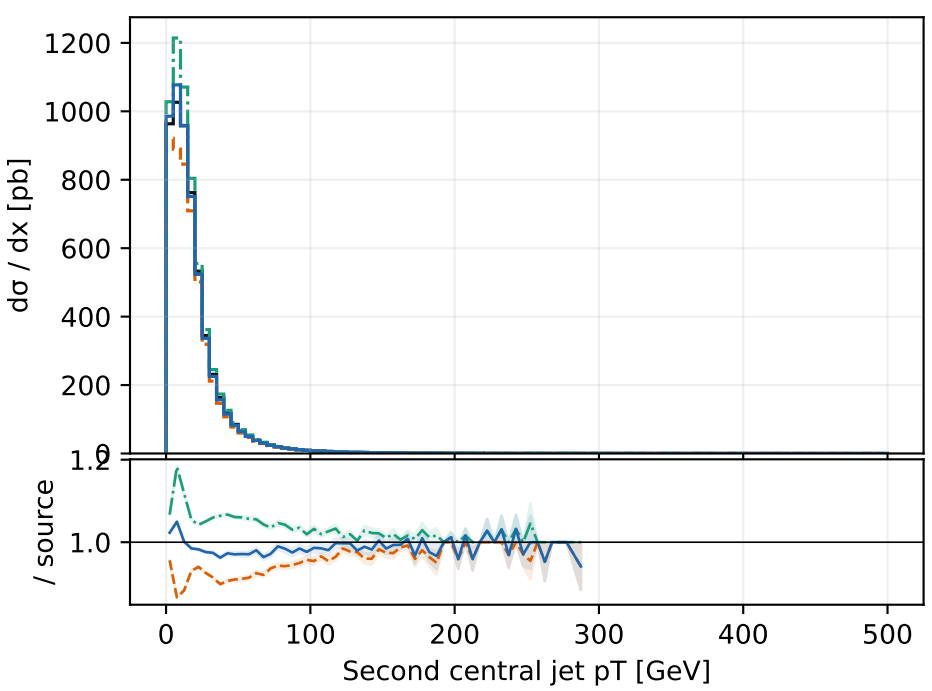

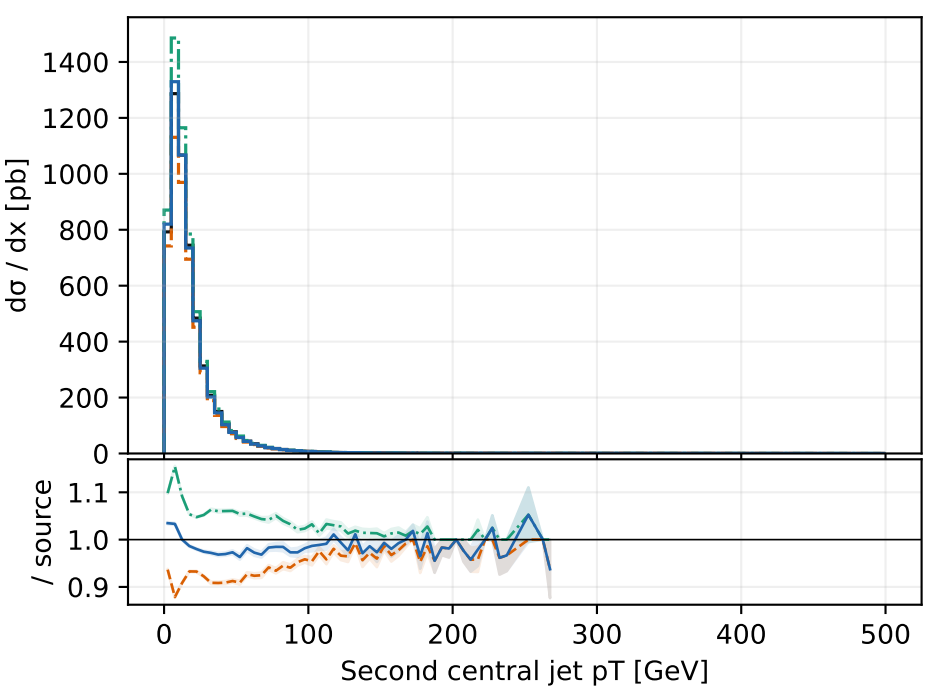

Full shower

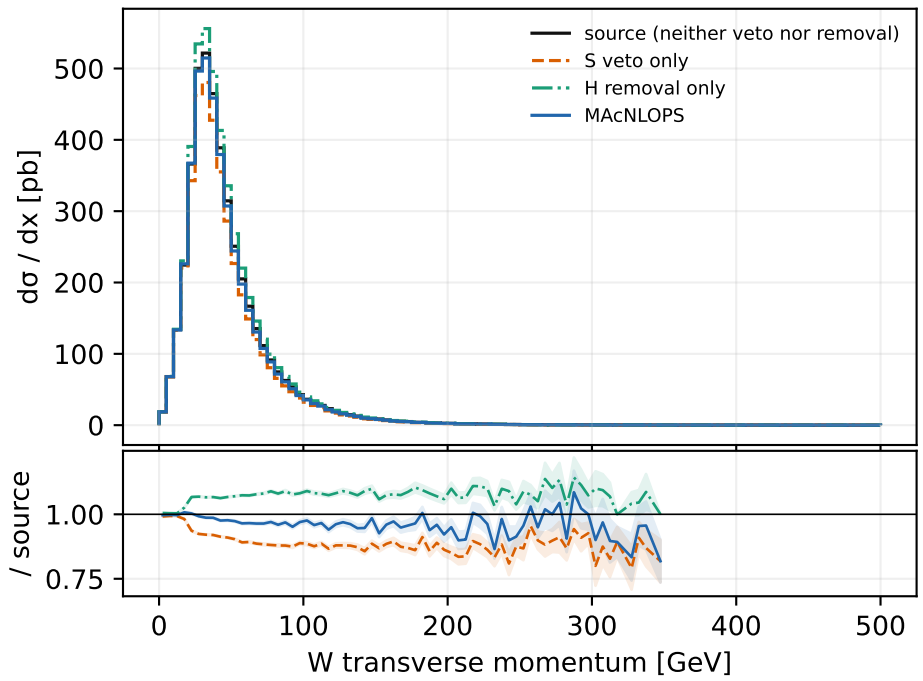

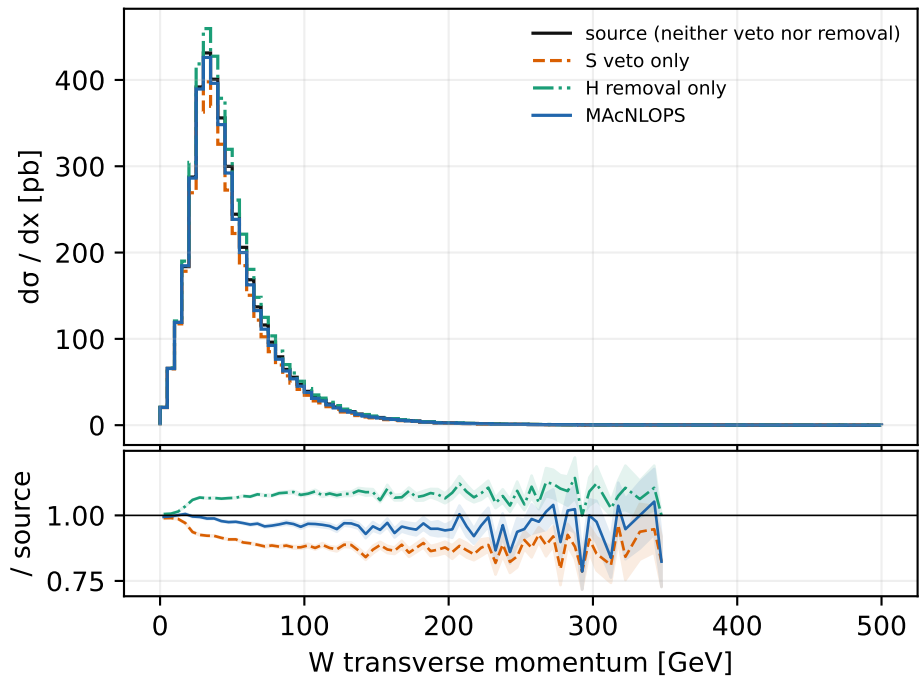

Signed weights; no renormalization. Conditional errors only. Stock ISR trial-weight warnings: 151 first / 5097 full; see report.

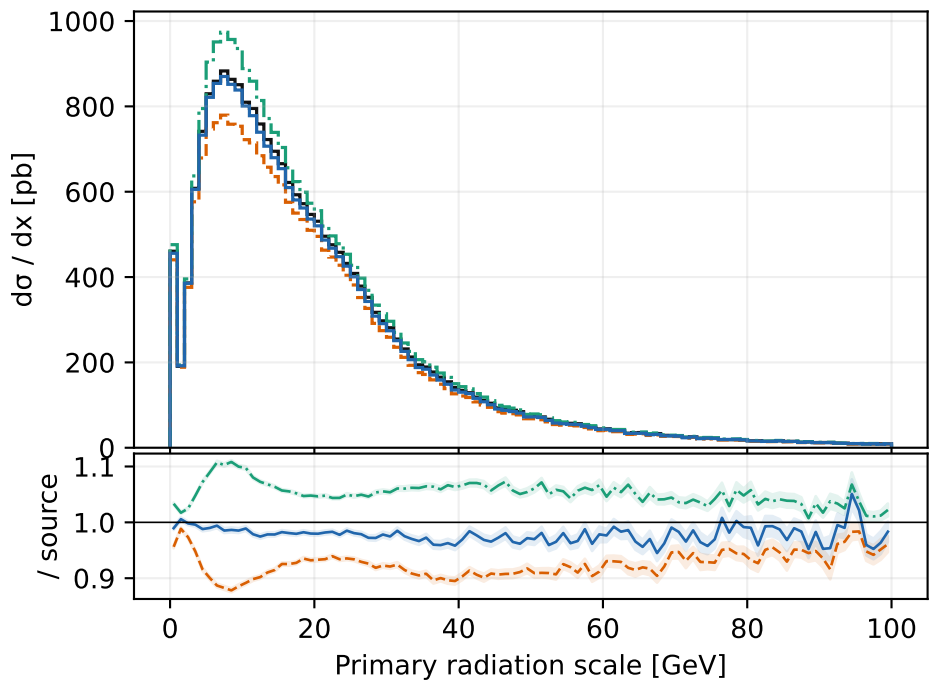

Wj: 1,000,000 events; anti-kT R = 0.5, jet pT > 25 GeV, |y| < 4.5

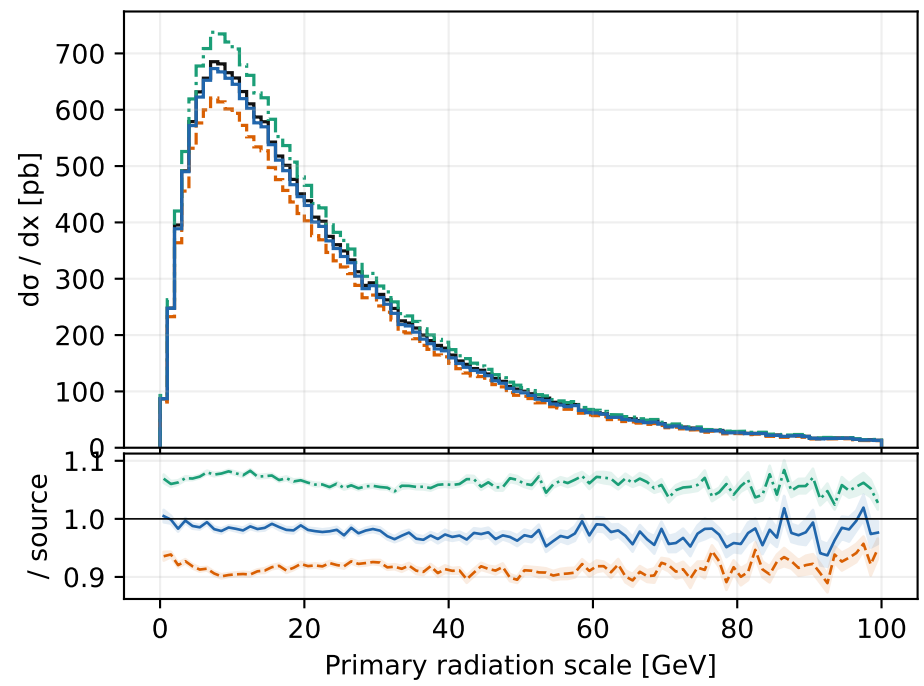

First emission

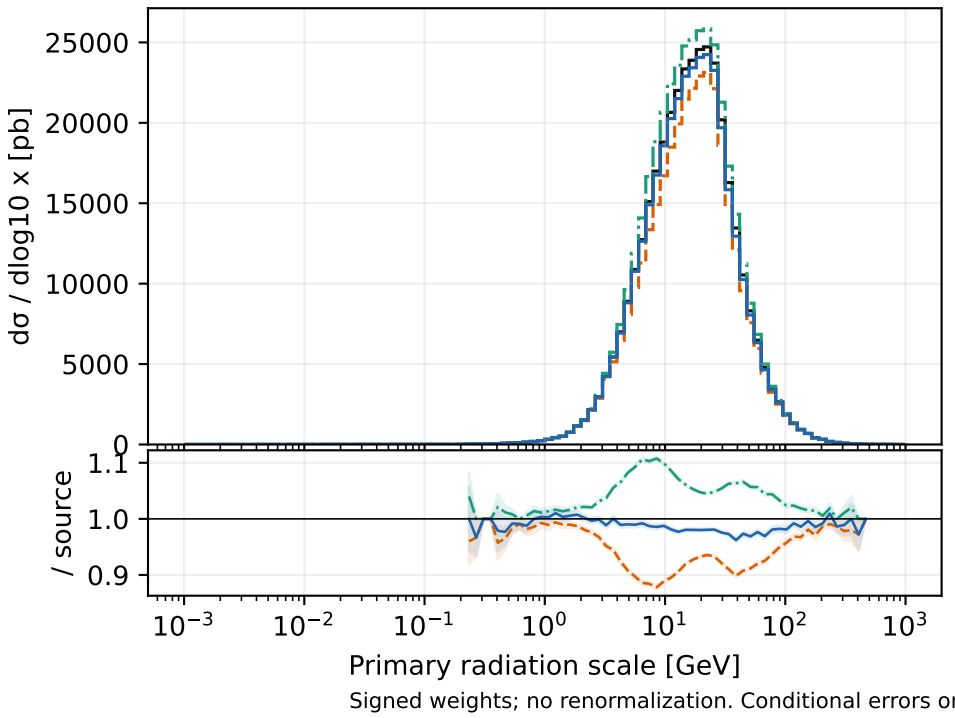

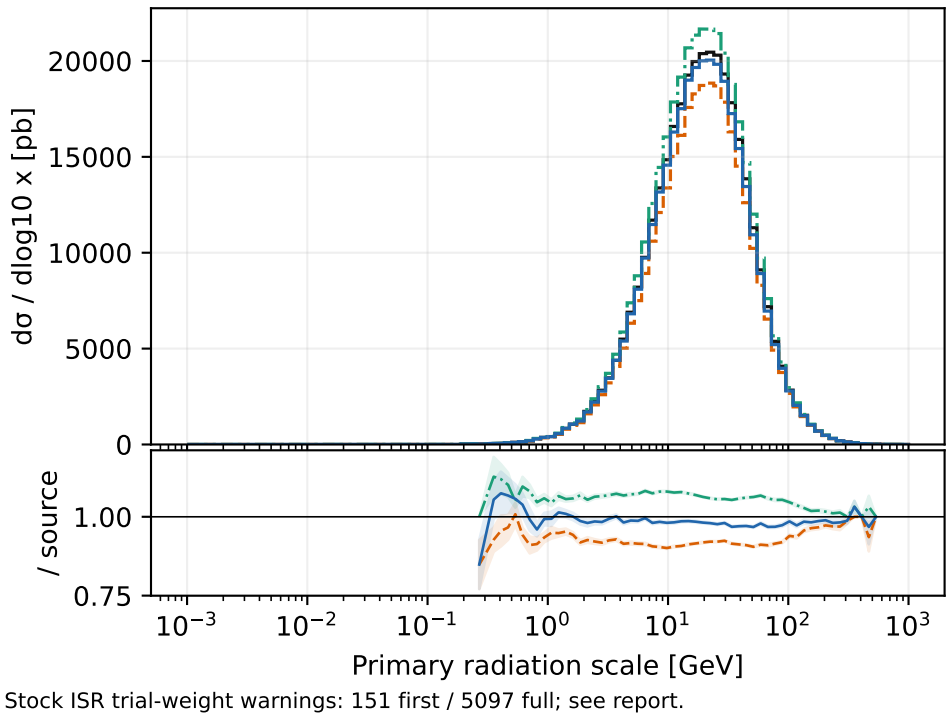

Full shower

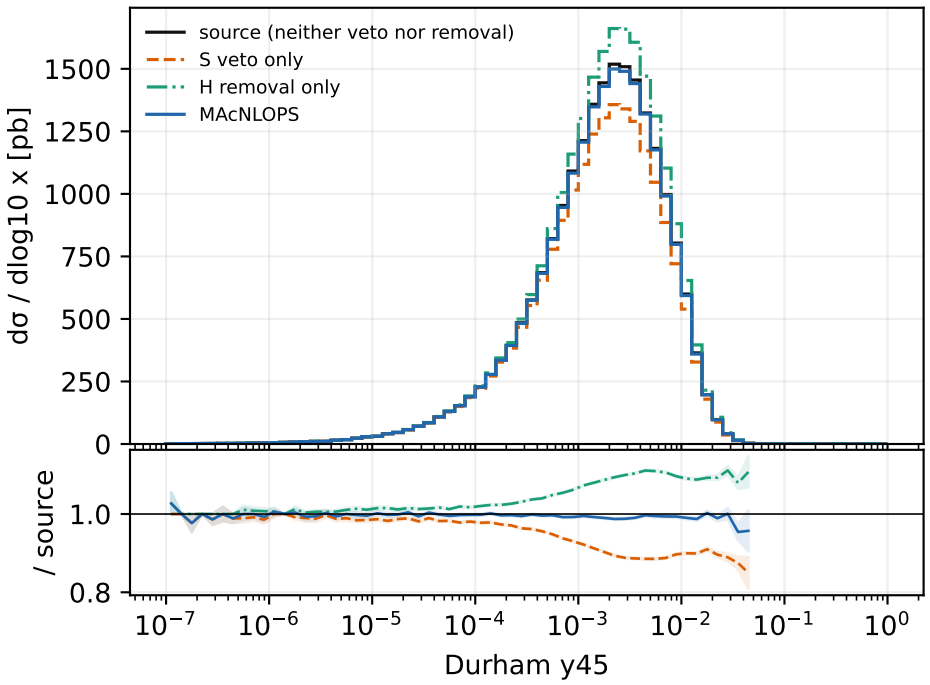

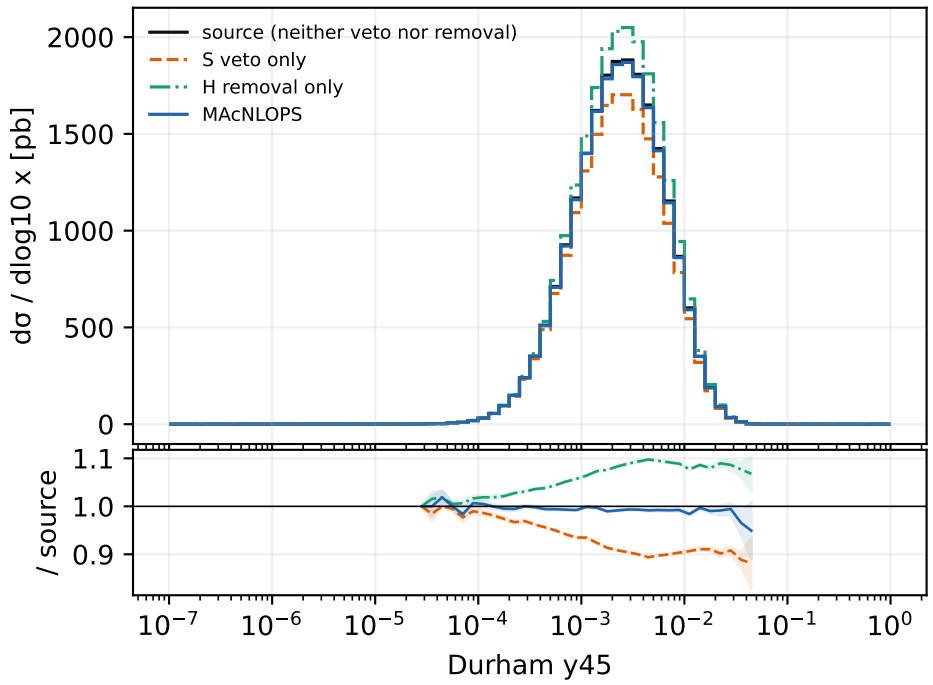

Signed weights; no renormalization. Conditional errors only. Stock ISR trial-weight warnings: 151 first / 5097 full; see report.

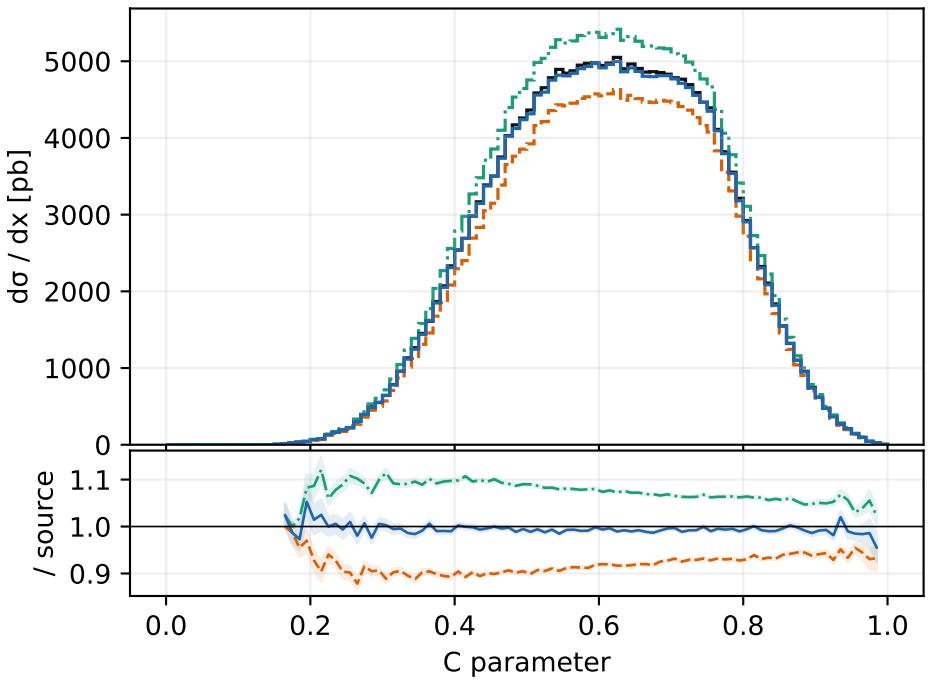

EE4j: 1,000,000 events; all generated source events

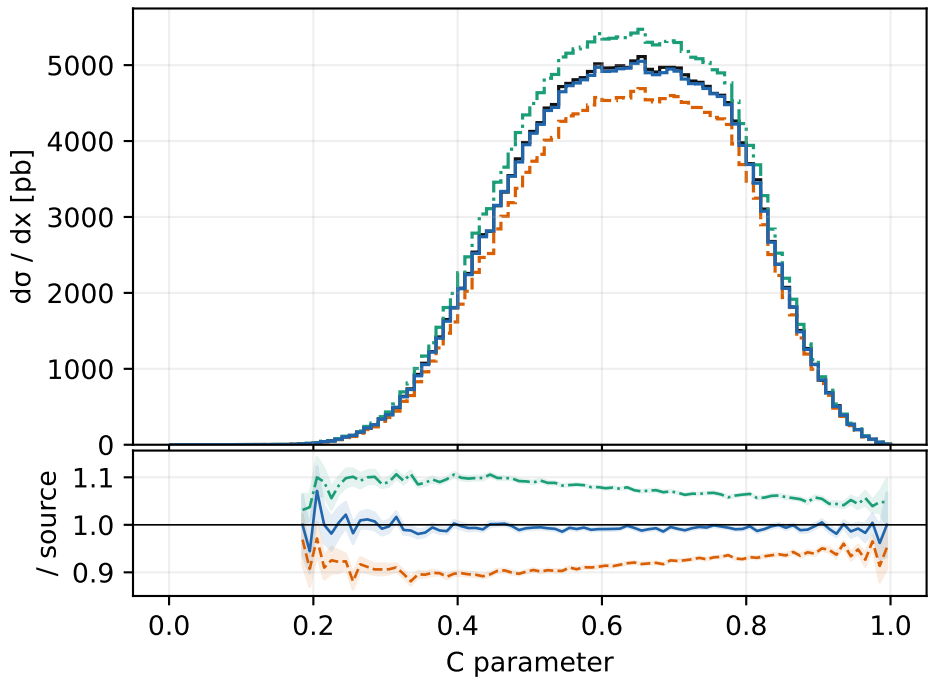

First emission

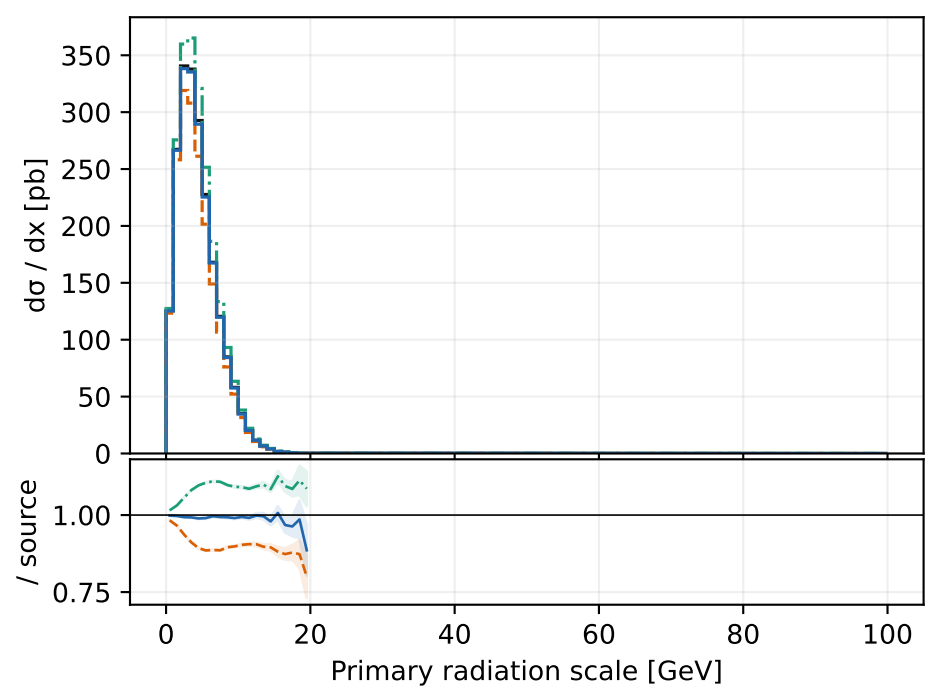

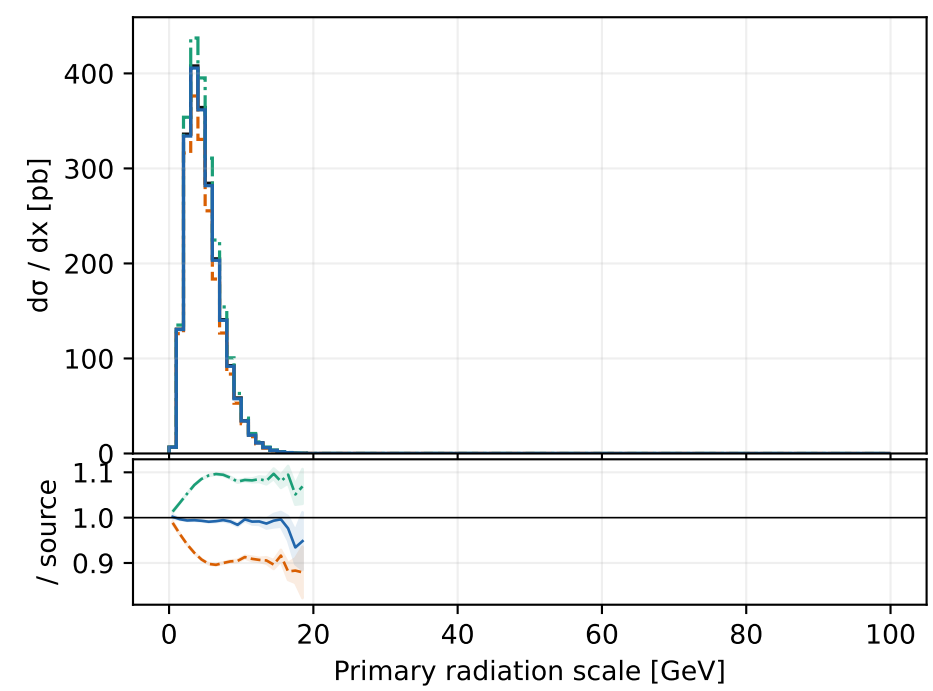

Full shower

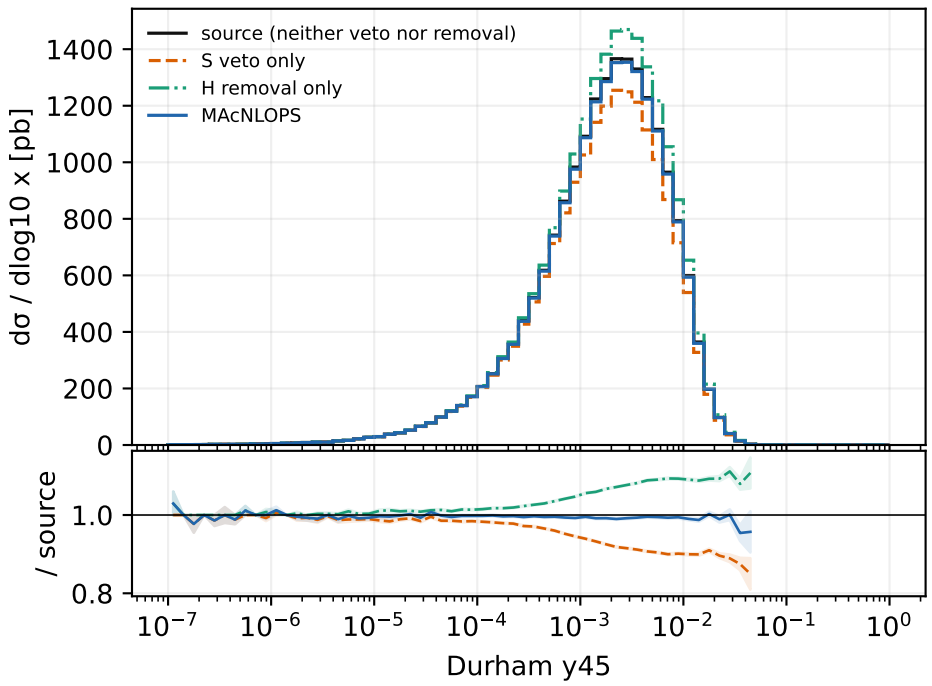

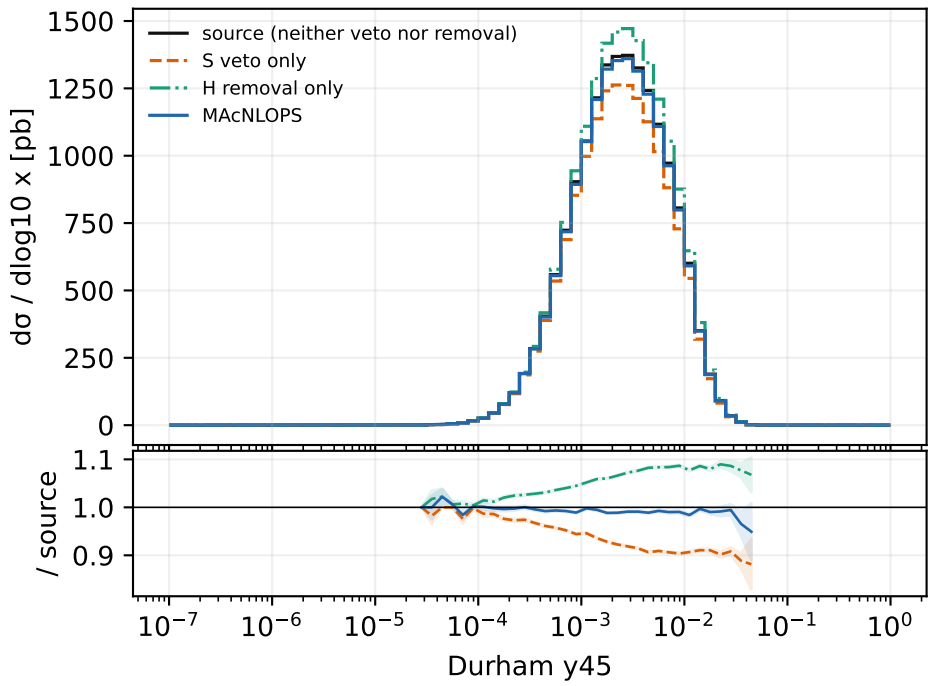

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.

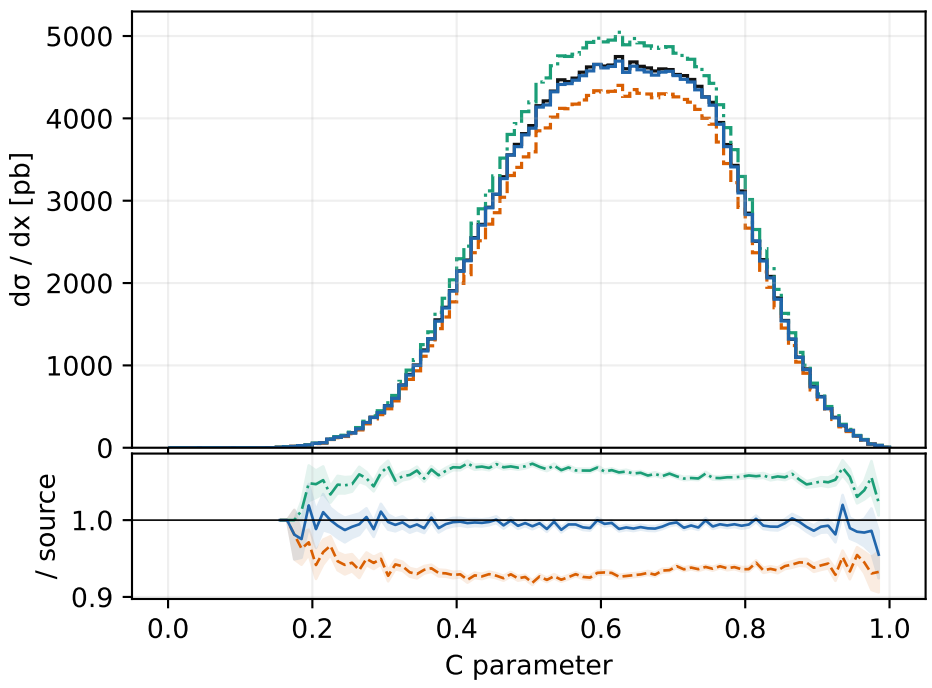

EE4j: 1,000,000 events; Durham ycut = 0.01, at least Born jet multiplicity

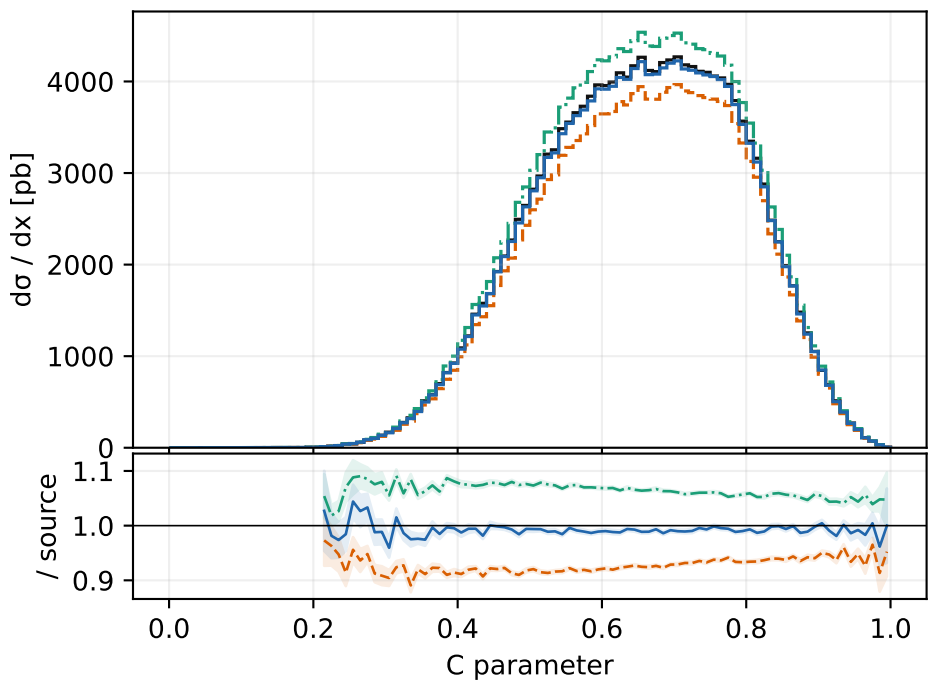

First emission

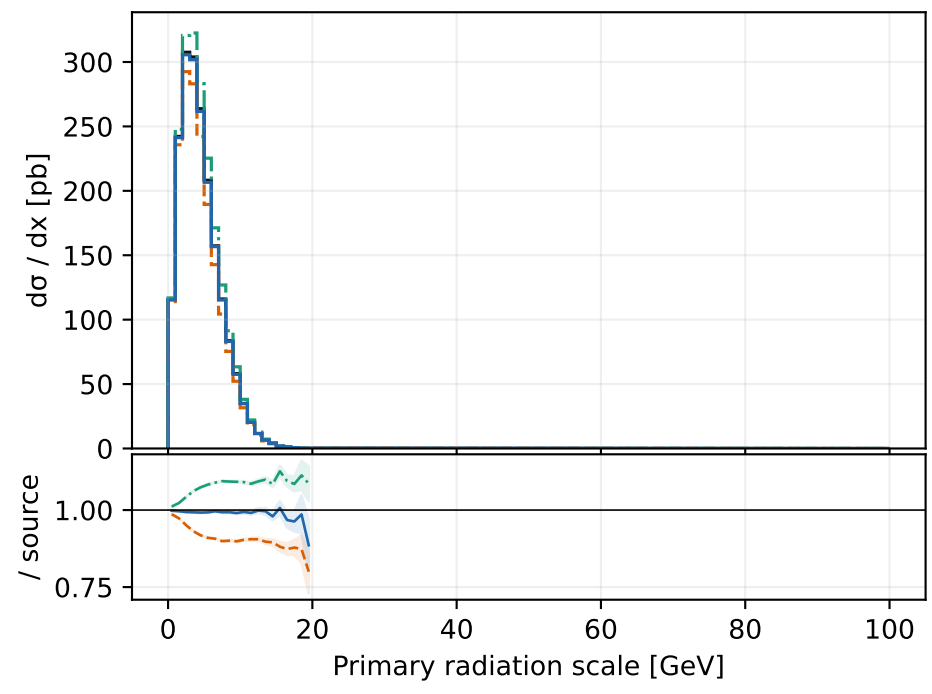

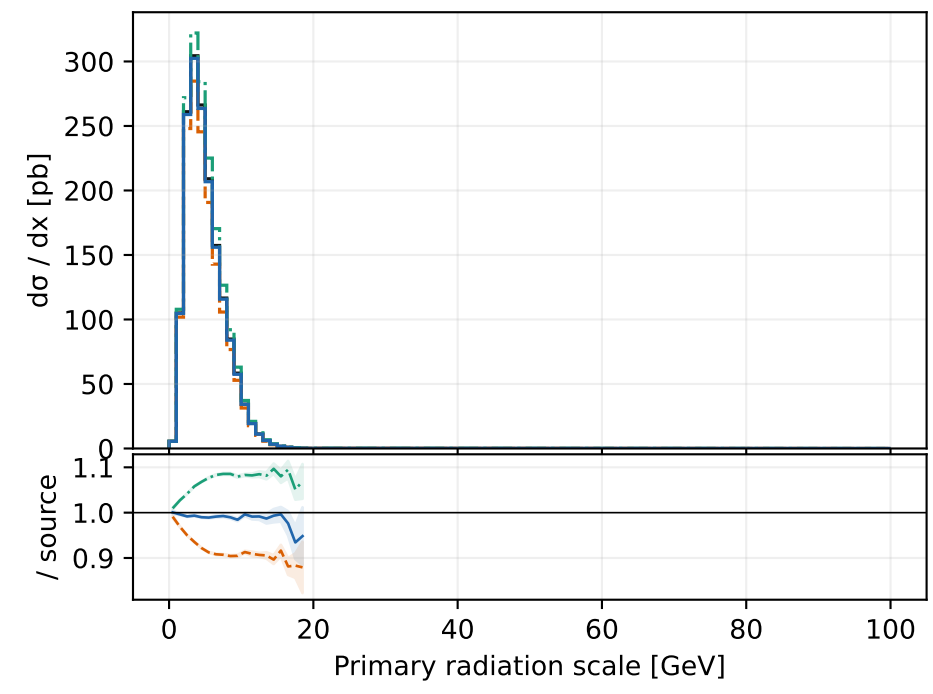

Full shower

Four weights share the same events. No survivor/fiducial renormalization. Ratios require baseline precision 25%. Errors omit integration/beta uncertainties.
