
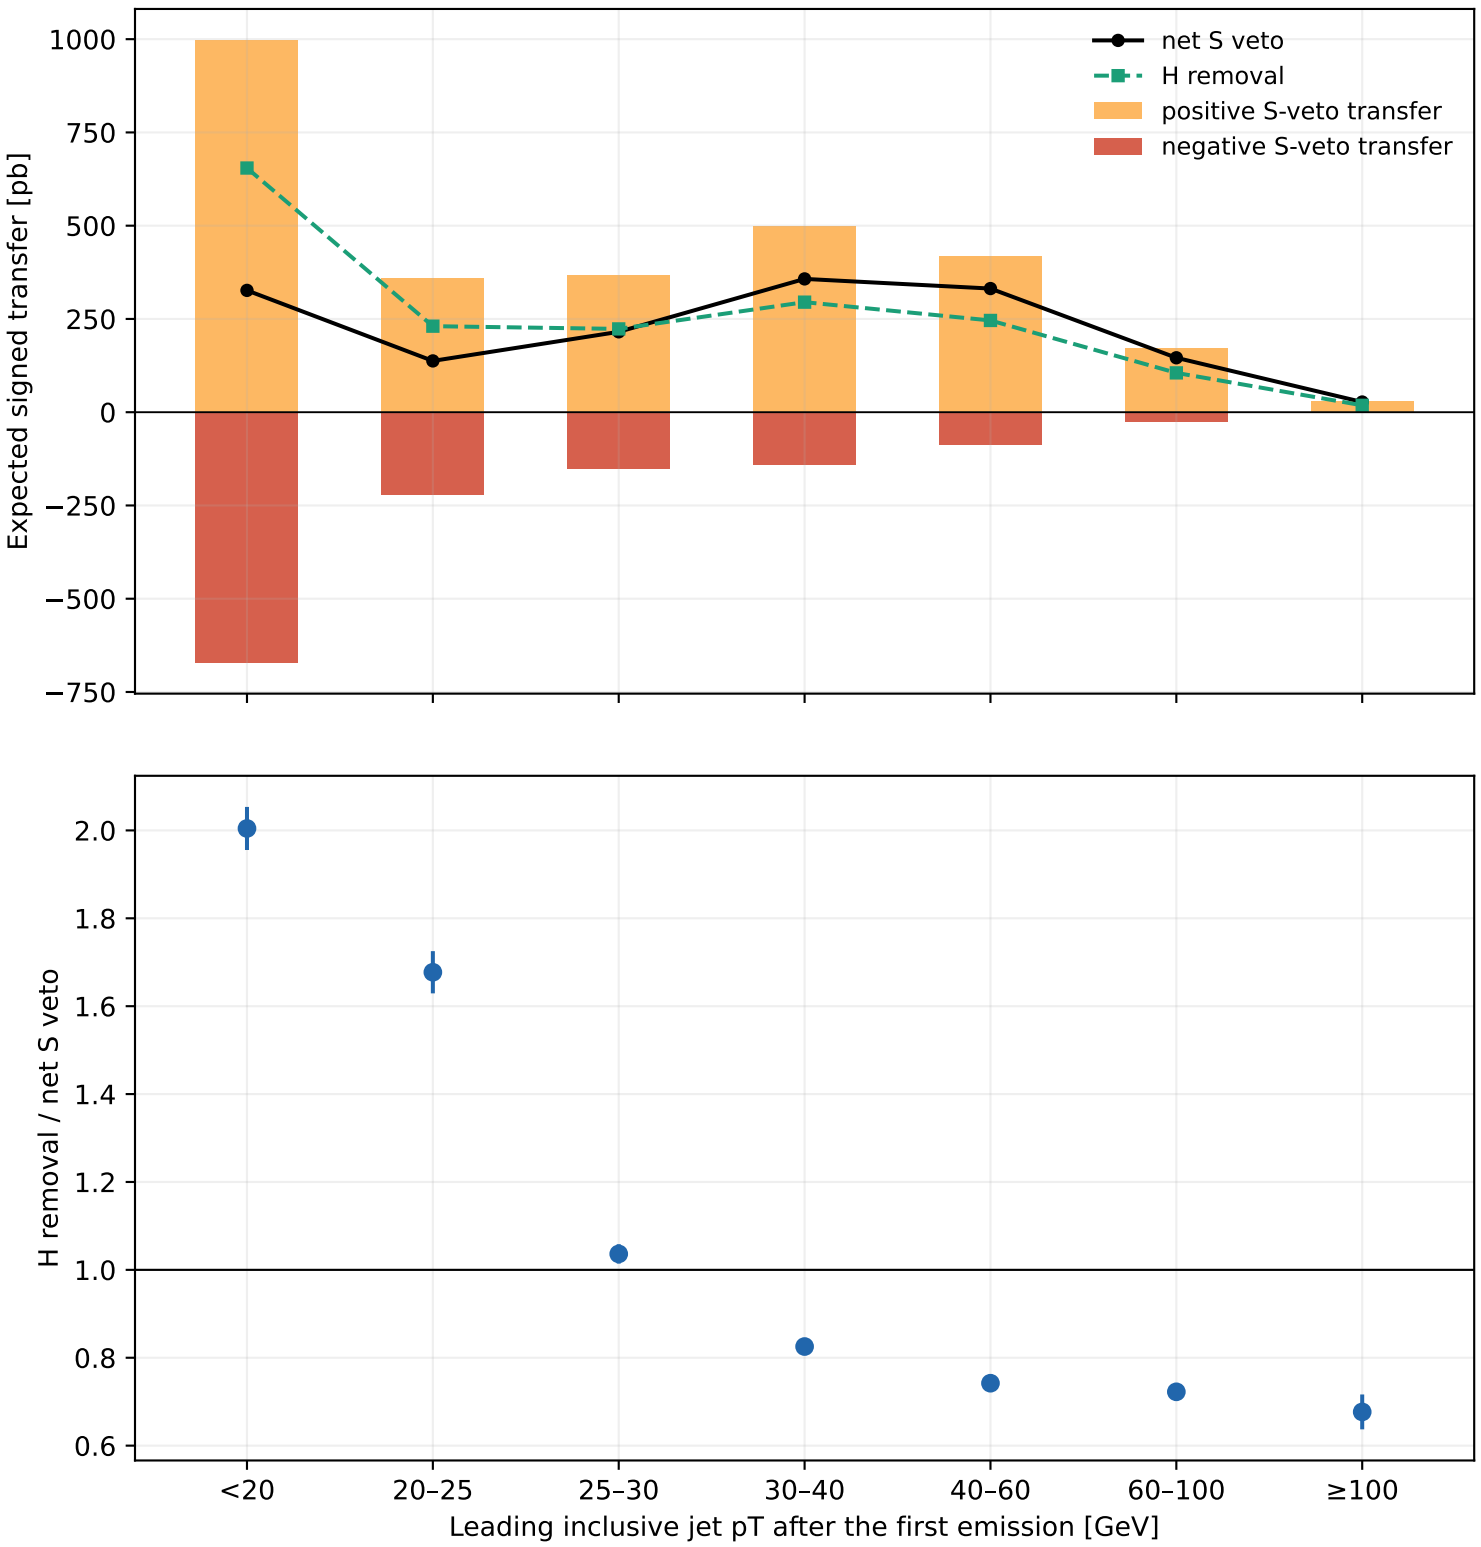
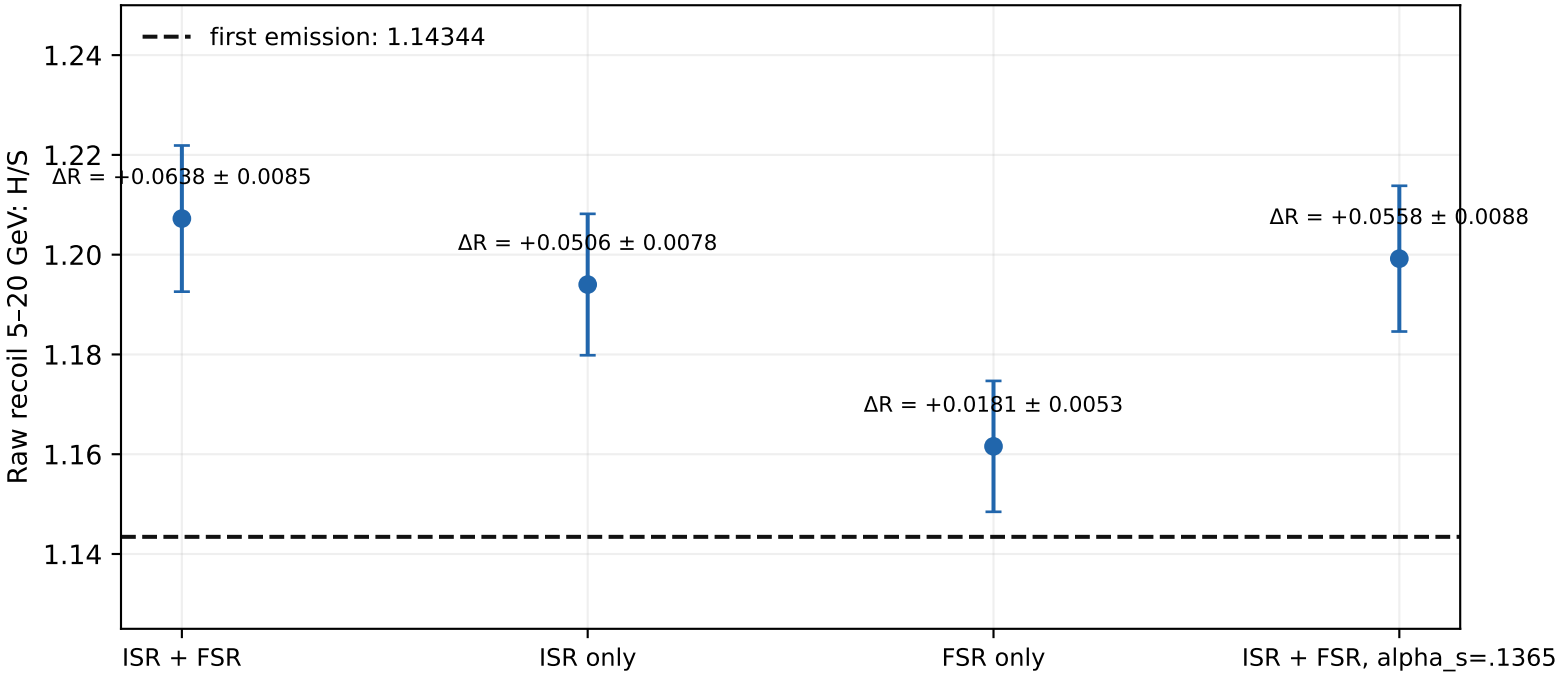
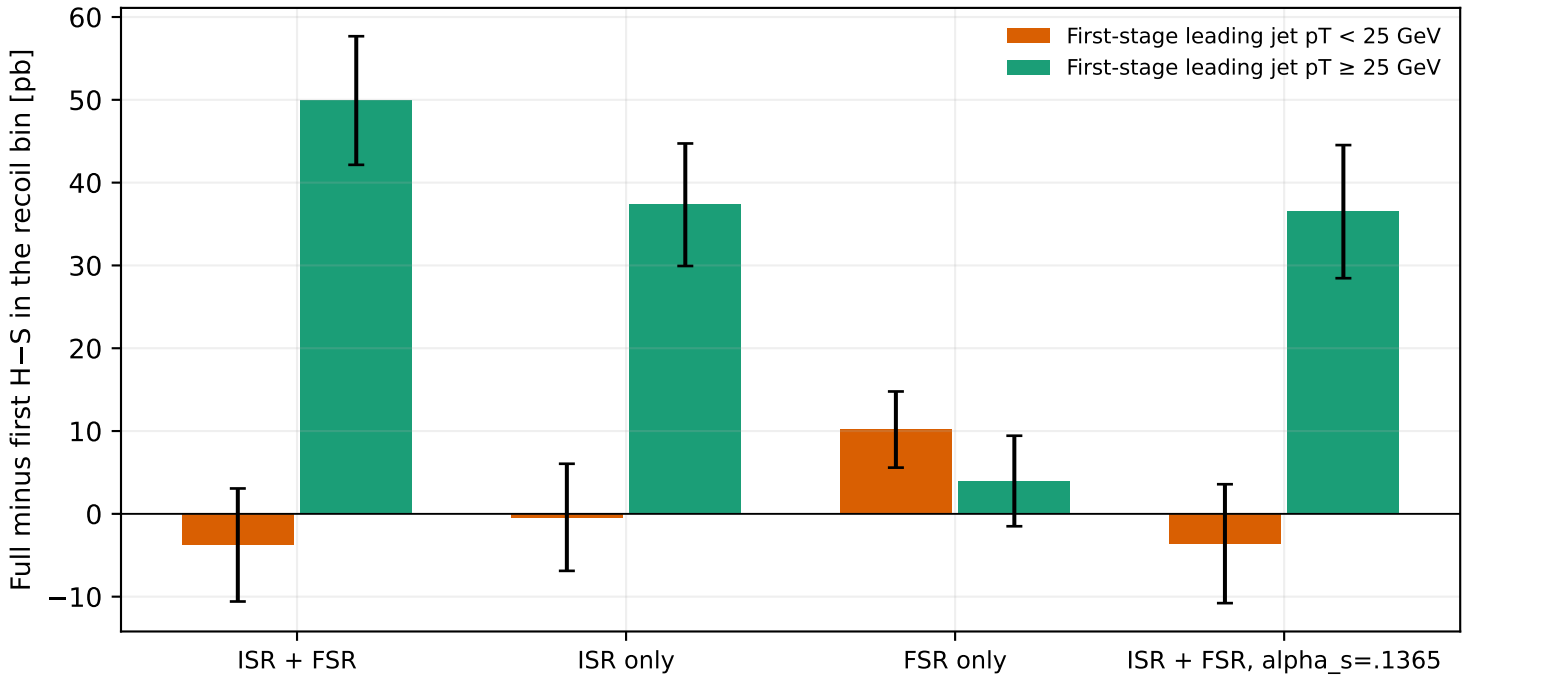
1M original source + 200k positive LO control; conditional errors only. Born-integral normalization cross-check is reported separately.



Expected probabilities on the unchanged 1M endpoints; signed weights, no renormalization. First two bins are below the 25 GeV analysis cut.

W+jet continuation controls: ISR transports an existing differential imbalance





All 155,756 nonzero realized transfers replayed in every mode, with common per-event seeds. Modes are diagnostic and nonadditive.
